<p>REVISIONS</p> <p>DATE: 4/26/2008 BY: CM REVISION: 1 DESCRIPTION: 100% DESIGN DEVELOPMENT</p>																																																																																																																																																																																																																															
<p>GENERAL NOTES</p> <p>1. A longitudinal brace at a 90 degree change in direction may act as a Transverse Brace if it is located within 2 feet of the change in direction of the member. (See ASCE 7-05, Section 12.12.4.2.2)</p> <p>2. A Transverse Brace may act as a Longitudinal Brace from the orientation shown. Check bracing on truss assemblies may be installed with all cables attached away from the braced ally or "cross br" (braced) on the ally.</p> <p>3. For cable bracing see separate construction, see ISAT Page 43.</p> <p>4. For ISAT Manual Page 4.3 Note 20 - inclined brace angle is excess of 45 degrees is acceptable up to a maximum 90 degree provided the brace spacing is reduced by 50%.</p> <p>5. Where Transverse Bracing Information is Blank, 45 degree spaced bracing (combined in one direction) shall be provided. (See ASCE 7-05, Section 12.12.4.2.2)</p> <p>6. For vertical support bracing, see separate "Vertical Support Bracing" drawings (if applicable) (ISAT), otherwise follow applicable code, specifications, and contract documents.</p>
