PROJECT DESCRIPTION

SKYLINE COLLEGE BUILDING 6 AND 7A
STUDENT SUPPORT AND COMMUNITY SERVICES CENTER AND SCIENCE ANNEX

THE WORK INCLUDES CONSTRUCTION OF A NEW STAND ALONE 2 STORY STUDENT SUPPORT & COMMUNITY SERVICES CENTER AND A NEW 3 STORY SCIENCE ANNEX. BOTH BUILDINGS ARE IN THE CENTRAL CAMPUS AREA ADJACENT TO EXISTING STRUCTURES. THE NEW SCIENCE ANNEX IS DIRECTLY ADJACENT TO THE EXISTING SCIENCE BUILDING. BOTH NEW BUILDINGS WILL BE TYPE II, 1 HOUR RATED, STEEL FRAMED STRUCTURES WITH FIRE SPRINKLERS. BUILDING UTILITIES WILL BE CONNECTED TO EXISTING CAMPUS INFRASTRUCTURE.

ADJACENT SITE AND LANDSCAPE WORK ARE ALSO PART OF THE PROJECT SCOPE. ALL NEW CONSTRUCTION WILL BE DESIGNED TO BE ACCESSIBLE. ADJACENT ACCESSIBLE PARKING WILL BE PROVIDED.

THE WORK IS BEING DESIGNED AND CONSTRUCTED AS A DESIGN/BUILD PROJECT. DUE TO SKYLINE'S REQUIREMENTS TO MEET THEIR EDUCATIONAL MASTER PLAN, FACILITIES MASTER PLAN AND BOND FUND COMMITMENTS, THE PROJECT IS BEING DIVIDED INTO 2 SEPARATE INCREMENTS FOR DSA REVIEW:

1. THE FIRST INCREMENT WILL BE A SUBMITTAL FOR THE FOUNDATION, SLAB ON GRADE, STRUCTURAL STEEL FRAMING AND METAL DECKS, AND ROUGH GRADING, .

2. THE SECOND INCREMENTAL SUBMITTAL WILL INCLUDE ARCHITECTURAL, MECHANICAL, ELECTRICAL, PLUMBING, CIVIL AND LANDSCAPE DOCUMENTS FOR EACH SEPARATE BUILDING TO COMPLETE THE PROJECT.

FOR INCREMENTAL SUBMITTAL ONE, ARCHITECTURAL DRAWINGS WILL BE INCLUDED FOR REFERENCE ONLY AND WILL BE NOTED AS SUCH. INCREMENT TWO WILL INCLUDE ALL DRAWINGS REQUIRED FOR STRUCTURAL DETAILS AND INFORMATION NOT INCLUDED IN INCREMENT ONE, AS WELL AS ALL OTHER DRAWING AND SPECIFICATION INFORMATION REQUIRED TO OBTAIN APPROVAL FOR FIRE, LIFE, SAFETY AND ACCESSIBILITY REVIEWS AND APPROVAL.

ALL WORK AND CONSTRUCTION SHALL COMPLY WITH ALL OTHER APPLICABLE BUILDING CODES, SOIL REPORTS, REGULATIONS AND SAFETY REQUIREMENTS.

2. TYPICAL DETAILS AND NOTES ON THESE SHEETS SHALL APPLY UNLESS SPECIFICALLY SHOWN OR NOTED OTHERWISE. DETAILS NOT FULLY SHOWN OR NOTED SHALL BE SIMILAR TO DETAILS SHOWN FOR SIMILAR CONDITIONS.

3. IT SHALL BE THE CONTRACTOR'S SOLE RESPONSIBILITY TO DESIGN AND PROVIDE ADEQUATE SHORING, BRACING AND FORMWORK, ETC., AS REQUIRED FOR THE PROTECTION OF LIFE AND PROPERTY DURING THE CONSTRUCTION OF THIS BUILDING. SHORING AND BRACING SHALL REMAIN IN PLACE UNTIL FLOORS, ROOF AND WALL SHEATHING HAVE BEEN ENTIRELY CONSTRUCTED. SHORING DRAWINGS AND CALCULATIONS SHALL BE SEALED BY REGISTERED ENGINEER AND SUBMITTED TO ARCHITECT/ENGINEER FOR REVIEW.

4. THE CONTRACTOR SHALL CHECK AND VERIFY ALL DIMENSIONS WITH THE ARCHITECTURAL, CIVIL, ELECTRICAL AND MECHANICAL DRAWING BEFORE PREPARING SHOP DRAWINGS, FABRICATION OR CONSTRUCTION. SEE ARCHITECTURAL, ELECTRICAL AND MECHANICAL DRAWINGS FOR SIZE AND LOCATIONS OF PIPES, SLEEVES, PITS, VENTS, DUCTS, ETC. AND DETAILS NOT SHOWN ON THE STRUCTURAL DRAWINGS.

5. CONSTRUCTION MATERIAL SHALL BE SPREAD OUT IF PLACED ON FRAMED ROOF OR FLOOR. LOAD SHALL NOT EXCEED THE DESIGN LIVE LOAD PER SQUARE FOOT. PROVIDE ADEQUATE SHORING AND/OR BRACING WHERE STRUCTURE HAS NOT ATTAINED DESIGN STRENGTH.

6. ALL DRAWINGS ARE CONSIDERED TO BE A PART OF THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REVIEW AND COORDINATION OF ALL DRAWINGS AND SPECIFICATIONS PRIOR TO THE START OF CONSTRUCTION. ANY DISCREPANCIES THAT OCCUR SHALL BE BROUGHT TO THE ATTENTION OF THE ARCHITECT PRIOR TO START OF CONSTRUCTION SO THAT A CLARIFICATION CAN BE ISSUED. ANY WORK PERFORMED IN CONFLICT WITH THE CONTRACT DOCUMENTS OR ANY CODE REQUIREMENTS SHALL BE CORRECTED BY THE CONTRACTOR AT THEIR OWN EXPENSE AND AT NO EXPENSE TO THE OWNER OR ARCHITECT.

7. NOTES AND DETAILS ON DRAWINGS SHALL TAKE PRECEDENCE OVER GENERAL NOTES AND TYPICAL DETAILS. IN WHERE NO DETAILS GIVEN, CONSTRUCTION SHALL BE AS SHOWN FOR SIMILAR WORK.

8. THE CONTRACT STRUCTURAL DRAWINGS AND SPECIFICATIONS REPRESENT THE FINISHED STRUCTURE. THEY DO NOT INDICATE THE METHOD OF CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE ALL MEASURES NECESSARY TO PROTECT THE STRUCTURE DURING CONSTRUCTION. SUCH MEASURES SHALL INCLUDE, BUT NOT BE LIMITED TO, BRACING, SHORING FOR LOADS DUE TO CONSTRUCTION EQUIPMENT, ETC. OBSERVATION VISITS TO THE SITE BY THE STRUCTURAL ENGINEER SHALL NOT INCLUDE INSPECTION OF THE ABOVE ITEMS.

9. OPENINGS, POCKETS, ETC., LARGER THAN 6" SHALL NOT BE PLACED IN CONCRETE SLABS, DECKS, WALLS, UNLESS SPECIALLY DETAILED ON THE STRUCTURAL DRAWINGS. NOTIFY THE STRUCTURAL ENGINEER WHEN DRAWINGS BY OTHERS SHOW OPENINGS, POCKETS, ETC., LARGER THAN 6" NOT SHOWN ON THE STRUCTURAL DRAWINGS, BUT WHICH ARE LOCATED IN STRUCTURAL MEMBERS. FOR ANY FURTHER RESTRICTIONS ON OPENINGS IN STRUCTURAL ELEMENTS, SEE APPLICABLE SECTIONS BELOW.

10. PIPES LARGER THAN 1 1/2" DIAMETER SHALL NOT BE EMBEDDED IN STRUCTURAL CONCRETE EXCEPT WHEN WHERE SPECIFICALLY APPROVED. NO CONDUITS SHALL BE PLACED IN CONCRETE FILL OVER METAL DECKING.

Question
General Contractor requires the following clarification for locating the footing construction joints, 7/S1.1

1. Is this detail a DSA or ACI requirement
2. Is there a standard area where the joint shall occur?
3. Can there be any relief on the 60' max parameter? On previous projects the Structural Engineer has provided relief.
4. Can CJ's occur where a grade beam has a braced beam embed?
5. Can CJ's occur where a pipe at footing occurs, 9 & 17/S1.1?
6. Can CJ's occur in a stepped footing?

The aforementioned items are required to finalize the proposed footing CJ drawing. The second scheduled pour, the 1st requiring this information, will be on 6/29/05.

Consultant Comments
Response to clarification questions:
1. Both
2. Joint to occur between pours
3. Though the 60 ft spacing requirement is not a specific code requirement, it is a good design/construction practise to mitigate concrete cracking. This 60ft parameter could be relaxed.
4. No ... notify SE where this situation occurs.
5. No ... notify SE where this situation occurs.

Question	Date Required: 6/24/2005

Please verify that detail 10 on sheet S1.6 of Increment One drawings is to occur on only one side of the beam. If not please provide locations.

Suggestion

Here is more clarification on Detail 10/S1.6:

...///...

1. At one side of all building perimeter beams

...///...

2. At one side of all openings of stairs & elevators

...///...

3. At interior locations on any one side of frame beams with not more than 10'-0" o.c. to laterally brace the top and bottom flange of frame beams. As shown on plan drawings, one lateral bracing beam will be always provided at center of brace-frame beam where braces intersect. As shown on plan drawing SB2.03 gridline 6, one lateral bracing beam will be always provided on any one side, at center of special moment frame beam and at 3'-0" away from special moment frame column-flanges.

Question

Reference Increment No. 1, sheet S1.5; detail 1; sheet S1.6 detail 2; and sheet S1.7 detail 1

Detail 1 of sheet S1.5 of Moment Connection at Gravity Columns refers to detail 2 of sheet S1.6 for the type of bolts to be used in this situation, calling out A325-N bolts. However, sheet S1.7 detail 1 specifies a different type of bolt, A490-SC, to be used at Moment Connections.

Please confirm moment connections at gravity columns require the A325-N bolts called out on sheet S1.6 detail 2, and not thos called out on sheet S1.7 detail 1.

Consultant Comments

A325-SC bolts per det. 2/S1.6 are required at moment connections per det.1/S1.5 ... except that if the moment connecti column happens to be a collector location then det. 2/S1.7 applies. Collector locations are marked with a dark dot on beams shown on framing plans ...///... Tejas, Crosby Group.

For further clarification the cantilevered beams on building 6 long the perimeter at the mentioned areas are to have a moment connection per detail 1 on S1.5 and using A325 bolts.

Cantilevered beams along gridline "G" between 1.4 and 3
Cantilevered beams along gridline 6 between "A" and "D"

NOTES:

1. NO HOLES MAY BE DRILLED OR PUNCHED IN EITHER FLANGE OF THE BEAM WITHIN THE LENGTH THAT HAS RECEIVED THE RADIUS CUT, OR BETWEEN THE RBS CUT AND THE COLUMN. SHEAR STUDS AND MECHANICAL DECK FASTENER TO THE BEAM FLANGE WITHIN THE LENGTH OF THE RADIUS CUT ARE PROHIBITED. SPOT WELDS FOR THE ATTACHMENT OF METAL DECKING ARE PERMITTED.
2. THE TOLERANCE ON THE DEPTH OF EACH RBS CUT IS PLUS OR MINUS 1/4 INCH. THE LENGTH OF THE CUT SHALL BE WITHIN PLUS OR MINUS 15% OF THE SPECIFIED LENGTH. THE DEPTH OF CUT ON EACH SIDE SHALL BE BALANCED, WITH NO MORE THAN 3/8 INCH TOTAL VARIATION IN THE DEPTH OF CUT FROM ONE SIDE TO THE OTHER. THE ATTACHMENT OF METAL DECKING ARE PERMITTED. (EXAMPLE; PLUS 1/8 INCH ON ONE SIDE, MINUS 1/4 INCH ON THE OTHER SIDE). THE BALANCE OF REMAINING FLANGE WIDTH ABOUT THE WEB OF THE BEAM IS NOT A CONSIDERATION.
3. AFTER THERMAL CUTTING, THE RBS SURFACE SHALL HAVE A SURFACE ROUGHNESS OF NO MORE THAN 500 MICRO INCHES (AWS SAMPLE 3). GRINDING OF THERMALLY CUT EDGES SHALL BE PROVIDED ONLY AS NECESSARY TO MEET THIS CRITERIA. CORNERS BETWEEN THE CUT RBS SURFACE AND THE TOP AND BOTTOM OF THE FLANGES SHALL BE GROUND TO REMOVE SHARP EDGES, BUT A MINIMUM RADIUS OR CHAMPER IS NOT REQUIRED.
4. GOUGES AND NOTCHES THAT OCCUR IN THERMAL CUT RBS SURFACE MAY BE REPAIRED BY GRINDING IF NOT MORE THAN 1/4 INCH DEEP. THE GOUGED OR NOTCHED AREA SHALL BE FAIRED BY GRINDING SO THAT A SMOOTH TRANSITION EXIST, AND THE TOTAL LENGTH OF THE AREA GROUND FOR THE TRANSITION SHALL BE NO LESS THAN 10 TIMES THE DEPTH OF THE REMOVED GOUGE. IF A SHARP NOTCH EXIST, THE AREA SHALL BE INSPECTED BY MT AFTER GRINDING TO ENSURE THAT ENTIRE DEPTH OF GOUGE OR NOTCH HAS BEEN REMOVED. GRINDING MAY NOT INCREASE THE DEPTH OF THE RBS CUT SECTION MORE THAN 1/4 INCH BEYOND THE SPECIFIED DEPTH OF CUT.
5. GOUGES AND NOTCHES THAT EXCEED 1/4 INCH IN DEPTH, BUT NOT TO EXCEED 1/2 INCH IN DEPTH, AND THOSE NOTCHES AND GOUGES WHERE REPAIR BY GRINDING WOULD INCREASE THE EFFECTIVE DEPTH OF THE RBS CUT BEYOND TOLERANCE, MAY BE REPAIRED BY WELDING. NOTCHES AND GOUGES EXCEEDING 1/2 INCH IN DEPTH MAY BE REPAIRED ONLY WITH THE APPROVAL OF ENGINEER. THE NOTCH OR GOUGE SHALL BE REMOVED AND GROUND TO PROVIDE A SMOOTH RADIUS OF NOT LESS THAN 3/8 INCH FOR WELDING. THE REPAIR AREA SHALL BE PREHEATED TO A TEMPERATURE BETWEEN 400°F AND 500°F, MEASURED AT THE LOCATION OF THE WELD REPAIR APPROXIMATELY ONE MINUTE AFTER REMOVAL OF THE HEATING SOURCE. REPAIR WELDING SHALL BE DONE WITH NOTCH-TOUCH ELECTRODES MEETING THE REQUIREMENTS IN FEMA 353 (DATED JULY 2000) PART I, SECTION 2.4. A REPAIR WPS IS REQUIRED. FOLLOWING WELDING, THE REPAIR WELD SHALL BE GROUND TO A SMOOTH CONTOUR MEETING THE RBS REQUIREMENTS, WITH A SURFACE ROUGHNESS NOT TO EXCEED 500 MICROINCHES. THE WELDED REPAIR AREA SHALL BE INSPECTED USING MAGNETIC PARTICLE TESTING.
6. WELDED DECK STUDS, BEAM PIPE HANGERS, EXTERIOR SUPPORT, ETC. SHALL NOT OCCUR IN THE AREA OF THE BEAM FLANGE BETWEEN THE COLUMN FACE AND 6" BEYOND THE EXTREME END OF THE RBS.

NOTES FOR MOMENT FRAMES AND BRACED FRAME CONNECTIONS:

1) NO WELD DAMS ARE ALLOWED.
2) MOMENT FRAME BEAM FLANGE TO COLUMN WELDS SHALL BE MADE BEFORE BOLTS ARE TENSIONED.
3) ALL WELDS USED IN PRIMARY MEMBERS AND CONNECTIONS IN THE LATERAL FORCE-RESISTING SYSTEMS SHALL BE MADE WITH A FILLER METAL THAT HAS A MINIMUM CHARPY V-NOTCH TOUGHNESS OF 20 FT-LBS AT MINUS 20 DEGREES F, AS DETERMINED BY AWS CLASSIFICATION OR MANUFACTURER CERTIFICATION. THIS INCLUDE ALL WELDS THAT CONNECT PLATES, SHEAR TABS STIFFENER PLATES, TUBE STEEL BRACES, GUSSET PLATES, CHORDS/ COLLECTORS & SMRF CONNECTIONS.
4) WELDING PROCESSES SHALL BE LIMITED TO SHIELDED METAL ARC WELDING (SMAW) AND FLUX CORE ARC WELDING (FCAW) WITH SELF SHIELDING ELECTRODES OR GAS SHIELDING, EXCEPT THAT SUBMERGED ARC WELDING CAN BE USED FOR SHOP WELDING.
5) FCAW FILLER METAL WIRE SHALL BE LIMITED TO 7/64" DIAMETER MAXIMUM. SMAW WELDING ELECTRODES SHALL BE BE LIMITED TO 5/32" DIAMETER. STRINGER BEADS SHALL NOT EXCEED 1/2" MAXIMUM. WEAVE BEADS ARE PROHIBITED.
6) FOR COMPLETE PENETRATION (C.P.) WELDS AT MOMENT FRAMES:
   A. RUN-OFF TABS PER AWS D1.1 ARE REQUIRED FOR ALL COMPLETE PENETRATION GROOVE WELDS (C.P.) ALL WELDS ARE TO BE STARTED AND COMPLETED ON THE RUN-OFF TABS AS MUCH AS POSSIBLE.
   B. THE MAXIMUM PREHEAT AND INTERPASS TEMPERATURE REQUIREMENTS OF AWS D1.1, TABLE 3.2 MUST BE FOLLOWED. SEE ALSO AWS D1.1 APPENDIX XI "ALTERNATE METHODS OF DETERMINING PREHEAT."
   C. RUN-OFF TABS AT THE TOP AND BOTTOM FLANGES AND BACKER BARS AT THE BOTTOM FLANGES SHALL BE REMOVED AFTER COMPLETION OF THE WELD. THE WELD SHALL BE GROUND SMOOTH AND THE WELD ROOT INSPECTED AND TESTED FOR IMPERFECTIONS IN ACCORDANCE WITH AWS D1.1, SECTION 9.25.
7) COOLING RATES ON FINISHED WELDS SHALL NOT EXCEED 250 DEGREES PER HOUR. COMPLETED CONNECTIONS MAY BE WRAPPED WITH THERMAL INSULATION TO MAINTAIN PROPER COOLING RATES.
8) PEEN EACH STRINGER PASS, 3 PASSES MINIMUM, WITH A SLAG GUN AT RIGHT ANGLES TO THE WELD. USE A DULL CHISEL TOOL SO THAT NO NICKS, CUTS, OR NOTCHES RESULT.
9) GENERAL CONTRACTOR TO SUBMIT WELDING PROCEDURE SPECIFICATION (WPS) FOR ENGINEERS APPROVAL PRIOR TO THE COMMENCEMENT OF ANY WELDING.

Question

In building 7A along gridline 7.2 there are three (3) steps in the WF-7 footing between gridline A the elevator pit. In this location there is a existing live sanitary sewer line for building 7 that conflicts with the steps.
Since we are not allowed any variance from detail 17 on sheet S1.1 Hensel Phelps Construction is proposing the following solution.
See Attached Sketches.
Please Cofirm These Details.
Hensel Phelps Construction is proceeding with these details per conversations between Hensel Phelps and Crosby Group.

Question

Please Reference Increment 1 Drawing SA2.01

On sheet SA2.01 there is a 10" CIP concrete wall along grid line 'C' that runs from grid line 5.6 to 6.7. Hensel Phelps Construction Co. would like to temporary leave the section open from the pilaster on 6 to the pilaster on 6.7. HPCC would install the female dowel splicer similar to the attached file for the first pour. At a later date the male/threaded bar would be installed and wall finished.

Please confirm that thread dowels can be used.

Consultant Comments

Shown splice coupler is acceptable ... however, verify constructibility. Alternate bars at each end may need to be extended one lap length beyond face for splicing. Splice coupler flange should not encroach clear cover requirements ... /// ... Tejas, Crosby Group.

Question

Reference Increment One drawings, sheet SB2.02 as well as Bambacigno Shop drawings. See also attached sketch.

Along gridline 6 of building 6 there are several cantilevers that extend to the west to support the outermost beams. On the south edge of these cantilevers at gridlines 6/B and 6/D, the web from the incoming beam has been bent slightly in order to bolt up flush with the shear tab. These beams bolting into the cantilevers are beams A2355 and A2234.

The inspector is concerned with this bending of the web and its affect on the beam and its connection to the cantilever at these locations.

Please clarfiy if this issue is a problem; if so, please offer any steps that may be needed in order to make corrections.

Consultant Comments

It is NOT acceptable to have bent steel plates. This may have yielded the beam web and potentially damaged shear tab too. Please do following: A. cut and replace existing shear tab plate attached to cantilever beams, B. cut bent web-extension plate from W12x long beam west of line 6, C. attach a new 3/8" thk x 12" long x 10.5" deep web-extension plate to web of this beam with a 5/16" fillet weld on three sides, 6" at top horiz., 10.5" vert., and 6" at bot horiz. D. The new web-extension plate should have required holes to match shear-tab plate holes per design drawings ... ///... Tejas, CrosbyGroup.

COLUMN ON LINE A/5 : NODE # 129

$P_{DEAD} = 127.8^K$

$P_{EH} = 118.4^K$

(REGISTERED PROFESSIONAL ENGINEER COLIN P. BLANEY #S 4377 Exp. 6-30-07 STRUCTURAL STATE OF CALIFORNIA)

[COLUMN] ON LINE D/5 : NODE # 139

$P_{DEAD} = 110.2^K$ } INCLUDES 30% ORTHAGONAL LOADS

$P_{EH} = 113.2^K$

* NOTE: IT IS CHECKED THAT NET UPLIFT IS OK PER CALC. SHEET ACF3 & ACF5.

* GRAVITY LOADS FOR SELF-WT & LIVE LOADS CAN BE CARRIED BY STEEL COL. TO FOUNDATIONS ∴ OK.

* FRAME LATERAL LOADS ARE CARRIED BY CONC. WALLS VIA SHEAR TRANSFER R. ∴ COL. OK.

* WE ONLY NEED TO CHECK TRANSFER OF STEEL COL. UPLIFT LOADS TO CONC. WALLS.

Question

Reference Increment No. 1 drawings sheet SB2.02 and SB2.03 as well as sheets S8.3.1 detail 8 and S8.3.2 details 14 and 13.

Also reference attached sketch.

The flat beams for the feature wall on gridline E are to be connected using a 1/2" thick stiffner plate to the beam's flanges. Although these pieces are correct per drawings and details, the offset between the centerlines has been found to be unacceptable to weld properly as specified. (See sketch) This situation occurs in two locations

Please advise.

Consultant Comments

If this alignment issue is occuring in the 7ft or 9ft long segments as shown in det 8/S8.3.1, then it would be aceptable to align the beam skewed (max. 3/8" as shown in your sketch) to provide CPW. Confirm with Architects and coordinate as necessary that this does not affect metal-stud framing. If the 3/8" skew occurs in 2'9" segment on detail 8/S8.3.1 then relocate the 1/2" thick plates at column web to their designed locations per 13/S8.3.2 and/or 14/S8.3.2 ... Tejas, Crosby Group

Answer **Date Answered: 12/12/2005**

See comments from Tejas, Crosby Group. The skewed conditions should not affect stud framing.

Question RFI 019 12-17-05 LH

Please Reference Increment 1 Drawing S8.3.2, and Increment 2 DSA Stamped Drawing AA2.01 thru AA2.31

On Detail 6 of S8.3.2 there are structural steel members shown to provide a walk way from Science Annex Building 7A to Existing Building 7. There is also a noted that states: 3'-0" (max.) SAD.

Referencing the architectural drawing the only information provided is that the passage way is to be 6'-6" wide as stated on AA2.01 and AA2.02.

1) What is the location in respect to gridline A on all floors.
2) How far does this walk way extend toward Existing Building 7? Structurals state a MAX not actual dimension.
3) What provision are needed to maintain 2 hour rating between building?
4) Is there a door on the building 7A side of the fire rating joint? If so please provide door type, quantity, and jamb/header details.

Consultant Comments

Answer Date Answered: 11/8/2005

1. See attached linked file. The dimension for locating the two beams for the "bridge" must be determined by the existing location of the fin at building 7 due to the new layout of walls for rooms in the building. The new 2 hour door that will separate the two buildings also affect the opening location. We will follow with an ASI to clarify the conditions.
2. The walkway (edge of deck) extends to Bldg 7 and must stop 3" clear of Bldg 7 to allow for seismic movement and the seismic joint. The joint may be required to be installed with Bldg 7 modernization work since a connetion to an opening in Bldg 7 is required to install the joint. The beams are 5' 3" center to center. The edge of the deck and shaft walls in the E/W direction connection the two bldgs is 2 1/2" beyond the center line of the beams.
3. 2 hour shaft wall systems is required to maintain the 2 hour rating. The seismic joints specificed should have a 2 hour rating where the 3" seismic separation for movement is required. Details will follow.
4. Although not show in the bridging documents, a 2 hr door will be required. Details will follow. Proposed wall locations in Bldg 7 are affecting the door location and opening width. Verifying the requirements for Bldg 7 must be completed prior to determining the door size and location.

GENERAL BRACE FRAME CONNECTION NOTES

1. ALL DETAILS INCORPORATED INTO SUBTITLED SHOP DRAWINGS SHALL BE DRAWN TO SCALE.
2. GENERAL CONTRACTOR SHALL SUBMIT COMPREHENSIVE SHOP DRAWING FOR EACH BRACE/GUSSET ASSEMBLY AS REQUIRED BY PLANS & SPECIFICATIONS. EACH CONNECTION SHALL BE FULLY DETAILED WITH THE INFORMATION GIVEN IN DETAILS, ALL APPLICABLE SCHEDULES, OR THAT INFORMATION WHICH CAN BE DETERMINED FROM GIVEN MEMBER SIZES AND PLAN GEOMETRY.
3. ITEMS SHOWN ON THIS SHEET ARE FOR REFERENCE ONLY. SEE SHEETS S9.1 THROUGH S9.5 FOR BRACE FRAME CONNECTION REQUIREMENTS.

SUGGESTED DETAILING SEQUENCE FOR BRACE TO BEAM COLUMN CONNECTION.

1. DETERMINE BRACE ANGLE ORIENTATION AND CONNECTION WORK POINT BASED UPON PLAN DIMENSIONS AND MEMBER SIZES
2. DETERMINE LENGTH OF WELD ALONG TUBE STEEL BRACE TO GUSSET PLATE. SET BOTH ANGLE TO 30 DEGREES INITIALLY.
3. ENSURE YIELD LINE IS PERPENDICULAR TO BRACE ANGLE.
4. DETERMINE YIELD LINE WORK POINT. YIELD LINE WORK POINT OCCURS AT BEAM OR COLUMN DEPENDING UPON GEOMETRY. THIS CAN BE FOUND BY LOWERING BRACE ASSEMBLY ALONG BRACE ORIENTATION LINE UNTIL EITHER BEAM OR COLUMN IS INTERSECTED.
5. VERIFY EXTENSION OF YIELD LINE DOES NOT INTERSECT THE PLATE DIMENSION "A".
6. NOTIFY THE STRUCTURAL ENGINEER IF ANY OF THE ABOVE ITEMS CAN NOT BE MET.
7. DETAILER MAY ADJUST THE "A" AND "L" DIMENSIONS (+/-1/8")*, AS NEEDED IN ORDER TO FACILITATE FABRICATION OF THE PLATE.
8. * DENOTES ACTUAL ALLOWANCE SHALL BE BASE UPON ENGINEERS DISCRETION AND DESIGN TOLERANCES.
9. SUGGESTED DETAILING (SHOP DRAWING) OF BRACE/GUSSET ASSEMBLY TO FOUNDATION & BEAM SIMILAR TO THAT SHOWN ABOVE.
