**NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE  
SAN MATEO COUNTY COMMUNITY COLLEGE DISTRICT 2015 FACILITIES MASTER PLAN AMENDMENT**

As the Lead Agency, San Mateo County Community College District (District) will prepare an Environmental Impact Report (EIR) for the above referenced project and would like your views regarding the scope and content of the environmental information to be addressed in the EIR. This EIR may be used by your agency when considering approvals for this Project. The Project description, location, and a brief summary of potential environmental effects are attached.

According to State law, the deadline for your response is 30 days after receipt of this notice; however, we would appreciate an earlier response, if possible. Written comments will be accepted until June 8, 2015 at 5:00 pm. Please identify a contact person, and send your comments to:

# **NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE SAN MATEO COUNTY COMMUNITY COLLEGE DISTRICT 2015 FACILITIES MASTER PLAN AMENDMENT**

## **A. INTRODUCTION**

The purpose of an Environmental Impact Report (EIR) is to inform decision makers and the general public of the environmental effects of a proposed project. The EIR process is intended to provide environmental information sufficient to evaluate a proposed project and its potential for significant impacts on the environment; to examine methods of reducing adverse environmental impacts; and to consider alternatives to the project. Although an EIR is one of the first documents to be reviewed when considering a project, the document itself, including its certification, does not constitute project approval. Upon finding the EIR is complete and in compliance with the California Environmental Quality Act (CEQA) of 1970, as amended, the District Board of Trustees will consider certification of the EIR at a public hearing.

The EIR for the Project will be prepared and processed in accordance with CEQA and will include:

- A summary of the Project
- A Project description
- An environmental setting, impact analysis and mitigation measures
- Alternatives to the Project as proposed
- Other CEQA considerations including: (a) any significant environmental effects which cannot be avoided if the Project is implemented, (b) the growth-inducing impacts of the proposed Project, and (c) cumulative impacts.

## **B. PROJECT LOCATION**

The San Mateo County Community College District (District) has three campuses in San Mateo County, California, including Cañada College in Redwood City and the Town of Woodside, College of San Mateo (CSM) in the City of San Mateo, and Skyline College in the City of San Bruno. Figure 1 shows the regional locations of each of the three campuses.

### ***Cañada College***

Cañada College is 124 acres located within Redwood City and the Town of Woodside. Regional access is from Interstate 280 (I-280) on the west side of the campus, as well as from State Route (SR) 84, approximately 1.5 miles to the southwest on the east side of campus. The main entrance is on Farm Hill Boulevard. There is a second entrance on West Entry Drive off of Cañada Road. The campus is surrounded by residential development on all sides; Emerald Hills Golf Course to the northeast; and Barkley Fields and Park on Farm Hill Boulevard to the south.

### ***College of San Mateo***

CSM is 150 acres located in the City of San Mateo. Regional access is from SR 92 on the northeast side of the campus. The main entrance is on West Hillsdale Boulevard on the southeast side of campus. There is a second entrance on CSM Drive, on the southwest side of campus. The campus is surrounded by residential development to the north, west, and east and by an office complex to the south.

### ***Skyline College***

Skyline College is 108 acres located in the City of San Bruno. Regional access is from I-280 on the east side of campus. The main entrance is from College Drive off of Skyline Boulevard on the east side of the campus.

There is a second entrance from College Drive off of Sharp Park Boulevard on the northwest side of the campus. The campus is surrounded by residential development to the north and east, undeveloped land to the west and south, and a County jail to the south.

### C. DESCRIPTION OF THE PROJECT

The 2015 Facilities Master Plan Amendment would continue the modernization and renovation work that began with adoption of the District's 2001 and 2006 Facilities Master Plans. The 2015 Facilities Master Plan Amendment identifies planned improvements at the three campuses including, but not limited to: building modernization and renovation, building demolition, new building construction, tree removal, landscaping/pedestrian improvements, and changes in parking and roadways. The locations of each of the proposed improvements are shown in Figures 2 through 4. The specific design and construction of campus projects would occur as projects are funded through the District's Capital Improvement Program.

The Project proposes the following development at each campus:

#### ***Cañada College***

- New construction:
  - Building 1, Kinesiology/Wellness, including demolition of existing Building 1 (approximately 39,500 sf) and construction of a new Building 1 (approximately 85,000 sf) and two new swimming pools (25 meters each)
  - Math/Science/Engineering Building (approximately 55,000 sf)
- Modernization and renovation:
  - Building 3, Performing Arts Center
  - Building 9, Library/Student Resource Center
  - Building 13, Multi-Disciplinary Instructional Center
  - Building 16, Instructional
  - Building 18, Instructional
- Pedestrian improvements:
  - North quad between existing Buildings 17 and 22
- Parking lot expansion:
  - Lot 6, an additional approximately 325 parking stalls
  - Lot 10, an additional approximately 150 to 200 parking stalls, including demolition of temporary Buildings 19, 20, and 21
- Potential renewable energy installations (e.g., photovoltaic, solar thermal, or cogeneration):
  - Building 1, Kinesiology/Wellness
  - Math/Science/Engineering Building

#### ***College of San Mateo***

- New construction:
  - Building 8, Kinesiology/Wellness, including demolition of existing Building 8 (approximately 56,000 sf) and construction of a new Building 8 (approximately 75,000 to 80,000 sf)
- Modernization and renovation:
  - Building 1, Public Safety
  - Building 3, Arts & Humanities

- Building 7, Facilities Maintenance Center
- Building 9, Library/Information Technology Services
- Building 17, Student Services
- Building 34, Fire Science/Facilities Management
- Corporation Yard
- Potential renewable energy installations (e.g., photovoltaic, solar thermal, or cogeneration):
  - Parking Lots 1, 2, and 9 (solar)
  - Building 7, Facilities Maintenance Center (cogeneration)

### ***Skyline Campus***

- New construction:
  - Environmental Sciences Building (approximately 18,000 to 20,000 sf), located west of parking lots F and G
  - Building 1, Social Science/Creative Arts Programs, including demolition of existing Building 1 (approximately 78,000 sf) and construction of new Building 1 (approximately 120,000 sf)
  - Boiler Plant adjacent to Building 2 (approximately 3,000 to 5,000 sf)
  - Energy Management Programs building (approximately 8,500 to 10,000 sf), located south of the Overflow Parking near Lot L
  - Residential Complex, up to 71 housing units, including up to 47 single-family detached homes for members of the public and up to 24 multi-family residential units for College faculty and staff, on Surplus Parcel B (approximate 8-acre parcel, located south of College Drive)
- Modernization and renovation:
  - Building 2, Workforce/Economic Development Prosperity Center
  - Building 5, Library
  - Building 14, Early Childhood Education
- Pedestrian improvements:
  - South pedestrian gateway between Building 1 and Lot C
  - Pedestrian connection between new Environmental Sciences Building and Building 8
- Parking lot expansion:
  - Demolition of existing Building 19 (approximately 39,000 sf) and expansion of Lot L, with approximately 125 to 175 additional parking stalls
- Potential renewable energy installations (e.g., photovoltaic, solar thermal, or cogeneration):
  - Building 1/1A
  - Energy Management Programs Facility

The proposed improvements would not facilitate increases in enrollment, employment, or contribute to campus growth. Enrollment at the three campuses has stabilized and is not currently limited as a function of campus size. The overarching purpose of the proposed improvements, including increasing building square footage, is to better serve approximately the same numbers of current students and staff with modern facilities and technology for the foreseeable future. Therefore, increasing the building square footage to improve functionality is not expected to result in significantly increased enrollment or campus employment.

However, there are two components of the Project that would increase use of specific campus facilities. Building 1, Kinesiology/Wellness Building, at the Cañada campus would be open to public memberships, in addition to use by students, staff and faculty. The residential complex at Skyline College would house the general public in single-family homes and staff and faculty in the multi-family housing.

#### **D. ENVIRONMENTAL EFFECTS OF THE PROJECT**

The Project could result in potential environmental effects associated with the following resource topics or environmental issues: aesthetics, air quality and energy, biological resources, cultural resources, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services and utilities, and transportation/traffic, cumulative impacts, alternatives to the project, and growth inducing impacts. The analysis and potential effects are described further below. The Project would not result in environmental effects associated with agriculture and forest resources or mineral resources because these are not present on the Project site or area.

##### ***Aesthetics***

The EIR will describe the existing visual character of the Project site and surrounding area including the existing viewpoints, notable visual resources, and the visual quality of the Project area and any impacts to scenic views that would result from development of the Project. This resource section will also consider the potential impacts of the creation of new sources of light and glare. Visual simulations from critical public viewpoints will be prepared to demonstrate changes in views as a result of the Project. The impact analysis will focus on changes in key public views, including alteration of visual character, impacts to scenic highways, and any proposed nighttime light and daytime glare, and will include recommendations and mitigation measures to lessen potential Project impacts, as appropriate.

##### ***Air Quality and Energy***

###### ***Air Quality***

The EIR will describe existing air quality conditions, potential impacts from Project construction and operation, and mitigation measures, including those recommended and required by the Bay Area Air Quality Management District (BAAQMD) designed to reduce the significance of identified Project-related air quality impacts. A screening-level health risk assessment will be prepared to estimate potential health risks associated with the Project. It is anticipated that construction activities could result in emissions of toxic air contaminants from diesel fuel combustion in construction equipment and heavy-duty trucks. Mitigation and/or avoidance measures will be identified for significant air quality impacts, as appropriate.

###### ***Energy Conservation***

If feasible, the EIR will provide a quantitative analysis of transportation energy impacts, construction and operational energy impacts, and renewable energy impacts. The EIR will include a qualitative energy analysis for the Project based on Appendix F of the CEQA Guidelines. The energy analysis will include a discussion of relevant regulations and will describe existing energy resources and consumption levels within California and San Mateo County and by the District. Consistent with CEQA Guidelines Appendix F, the proposed Project will be evaluated for its potential to lead to a wasteful, inefficient, and unnecessary usage of direct or indirect energy.

### ***Biological Resources***

The EIR will provide a description of the existing biological resources on each of the three campuses, a discussion of potential impacts including tree removal, and appropriate mitigation and/or avoidance measures will be included in the EIR.

### ***Cultural Resources***

The EIR will evaluate potential impacts to historical resources, archaeological resources, and human remains. Potential impacts include the inadvertent discovery of unknown buried resources and altering the character of historic resources. The EIR will identify mitigation and/or avoidance measures for significant impacts to cultural resources, as appropriate.

### ***Geology and Soils***

The EIR will describe geologic and soil constraints and potential geologic and seismic hazards that could result in Project impacts, which could also include loss of top soil and erosion from grading. The EIR will identify mitigation and/or avoidance measures for significant geology and soils impacts, as appropriate.

### ***Greenhouse Gas Emissions***

The EIR will describe the existing greenhouse gas (GHG) emissions at each of the campuses, the Project's impacts to climate change and climate change's impacts to the Project, and mitigation measures designed to reduce the significance of Project-related climate change impacts.

### ***Hazards and Hazardous Materials***

There may be hazardous materials issues associated with building demolition (e.g., asbestos) and with serpentine soils at all three campuses. The EIR will discuss site hazards on the basis of available mapping of hazards and information in the Department of Toxic Substances Control database. In analyzing the Project's potential impacts, the EIR will take into account standard code requirements and best management practices for the handling of hazardous materials. Mitigation measures will be identified to reduce significant hazardous materials impacts, as appropriate.

### ***Hydrology and Water Quality***

The EIR will describe potential effects on hydrology and water quality, including stormwater drainage and the potential for flooding on the site, and will identify appropriate mitigation and/or avoidance measures for these impacts. In addition, the EIR will describe impacts from stormwater runoff and drainage from the proposed development. The impact analysis will identify any additional mitigation to avoid significant impacts, if necessary.

### ***Land Use and Planning***

The EIR will describe the existing land uses on and adjacent to the Project site, and the Project's compatibility with existing and planned land uses on and adjacent to the campuses. It is important to note that the College District Board of Trustees has exempted the 2015 Facilities Master Plan Amendment project from the application of city and county zoning ordinances. At Skyline College, the proposed future housing will be examined on the basis of its consistency with the City of San Bruno General Plan in coordination with the City. Housing is not exempt from zoning because it is not a classroom use. Land use impacts resulting from the proposed uses on the site will be addressed. Mitigation and/or avoidance measures will be identified for significant land use impacts, as appropriate.

## ***Noise***

The EIR will evaluate noise and vibration impacts associated with construction and operation of the Project. Existing noise conditions at each of the three campuses will be described. The EIR will also address the compatibility of the proposed uses with the Project site's existing and future noise exposure, offsite impacts resulting from onsite noise sources, Project-generated traffic noise impacts to sensitive receptors in the area, and the temporary noise increase during Project construction. Mitigation and/or avoidance measures will be identified for significant noise impacts, as appropriate.

## ***Population and Housing***

The EIR will examine the Project's potential to effect population and housing. This section will discuss qualitatively the housing supply and demand in the context of Association of Bay Area Governments (ABAG) regional household forecasts and fair share housing allocations. Mitigation measures will be identified that would avoid or reduce significant impacts to population and housing.

## ***Public Services and Utilities***

The EIR will identify existing public services, systems utilities, and service providers. The analysis will examine whether existing public services and utilities are sufficient to serve the Project and the impacts, if any, of expanding public services if that is necessary. Existing public services and utilities and providers in the Project area will be identified to determine the needs of the new facilities. The analysis will also evaluate the Project's effects on public services and utility disruption, if any, and mitigation measures will be identified that would avoid or reduce significant impacts to public services and utilities, if necessary.

## ***Recreation***

The EIR will examine the extent to which the Project may affect nearby recreation areas or create the need for new recreation areas. Existing recreational facilities in the campus areas will be identified to determine whether any such facilities would be disrupted during Project construction. An assessment will be performed to determine whether Project implementation would result in substantial increase in demand for recreational facilities such that new or improved facilities would be required. The Project includes a public Health Club and Aquatic Center at the new Kinesiology/Wellness Building on the Cañada College campus that would be available to the public; this is an addition to recreation uses in the area. Mitigation measures will be identified that would avoid or reduce significant impacts to recreation, if necessary.

## ***Transportation/Traffic***

The EIR will describe the existing transportation network and evaluate the Project's traffic impacts. The EIR will analyze construction-related traffic impacts at each campus. An operations or trip generation analysis will be conducted for the public Health Club and Aquatic Center located at the Kinesiology/Wellness Building at Cañada College and the new residential development proposed at Skyline College. Mitigation and/or avoidance measures will be identified for any significant traffic impacts.

## ***Cumulative Impacts***

In accordance with CEQA, the EIR will address the impacts of implementing this Project in combination with other past, present, and reasonably foreseeable future projects in San Mateo County and neighboring jurisdictions. The EIR will identify the Project's contribution to cumulative impacts and, if necessary, mitigation to reduce the contribution to a less than significant level.

### ***Alternatives to the Project***

In accordance with CEQA, the EIR will qualitatively evaluate a reasonable range of potentially feasible alternatives to the Project and a “No Project” alternative. Alternatives will be identified based on their ability to meet most of the Project objectives but reduce or avoid significant environmental impacts, and will likely include a reduced intensity alternative.

### ***Other CEQA Sections***

The EIR will include other sections required by CEQA, including Significant Unavoidable Impacts, Significant Irreversible Environmental Changes, Growth-inducing Impacts, Authors and Consultants, References, and Technical Appendices.

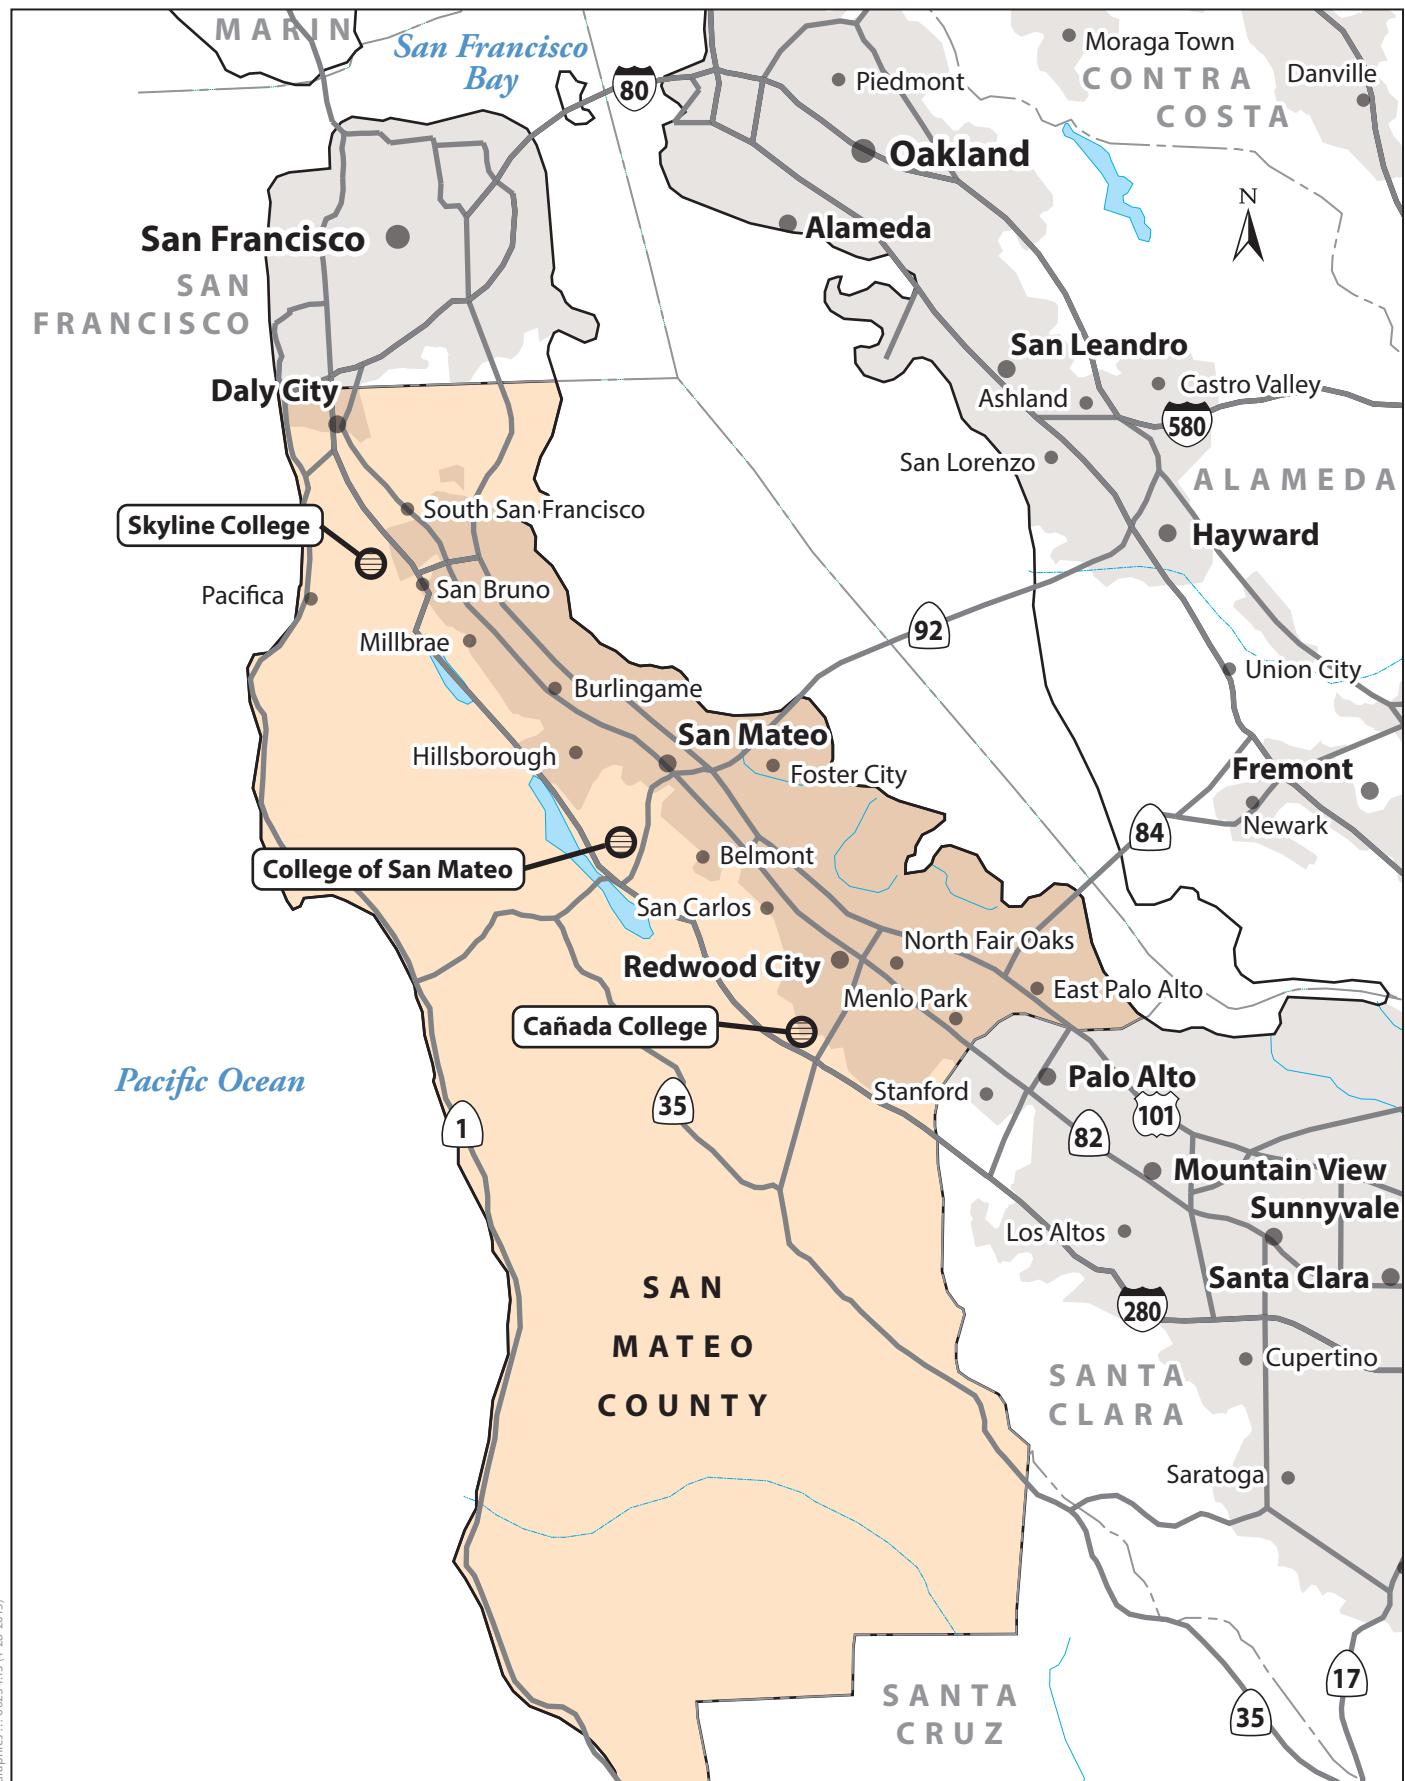

## **E. SCOPING COMMENTS**

The District is soliciting input regarding the scope and content of the EIR and environmental information appropriate to your agency's statutory responsibilities or of interest to your organization. Specifically, we are requesting the following.

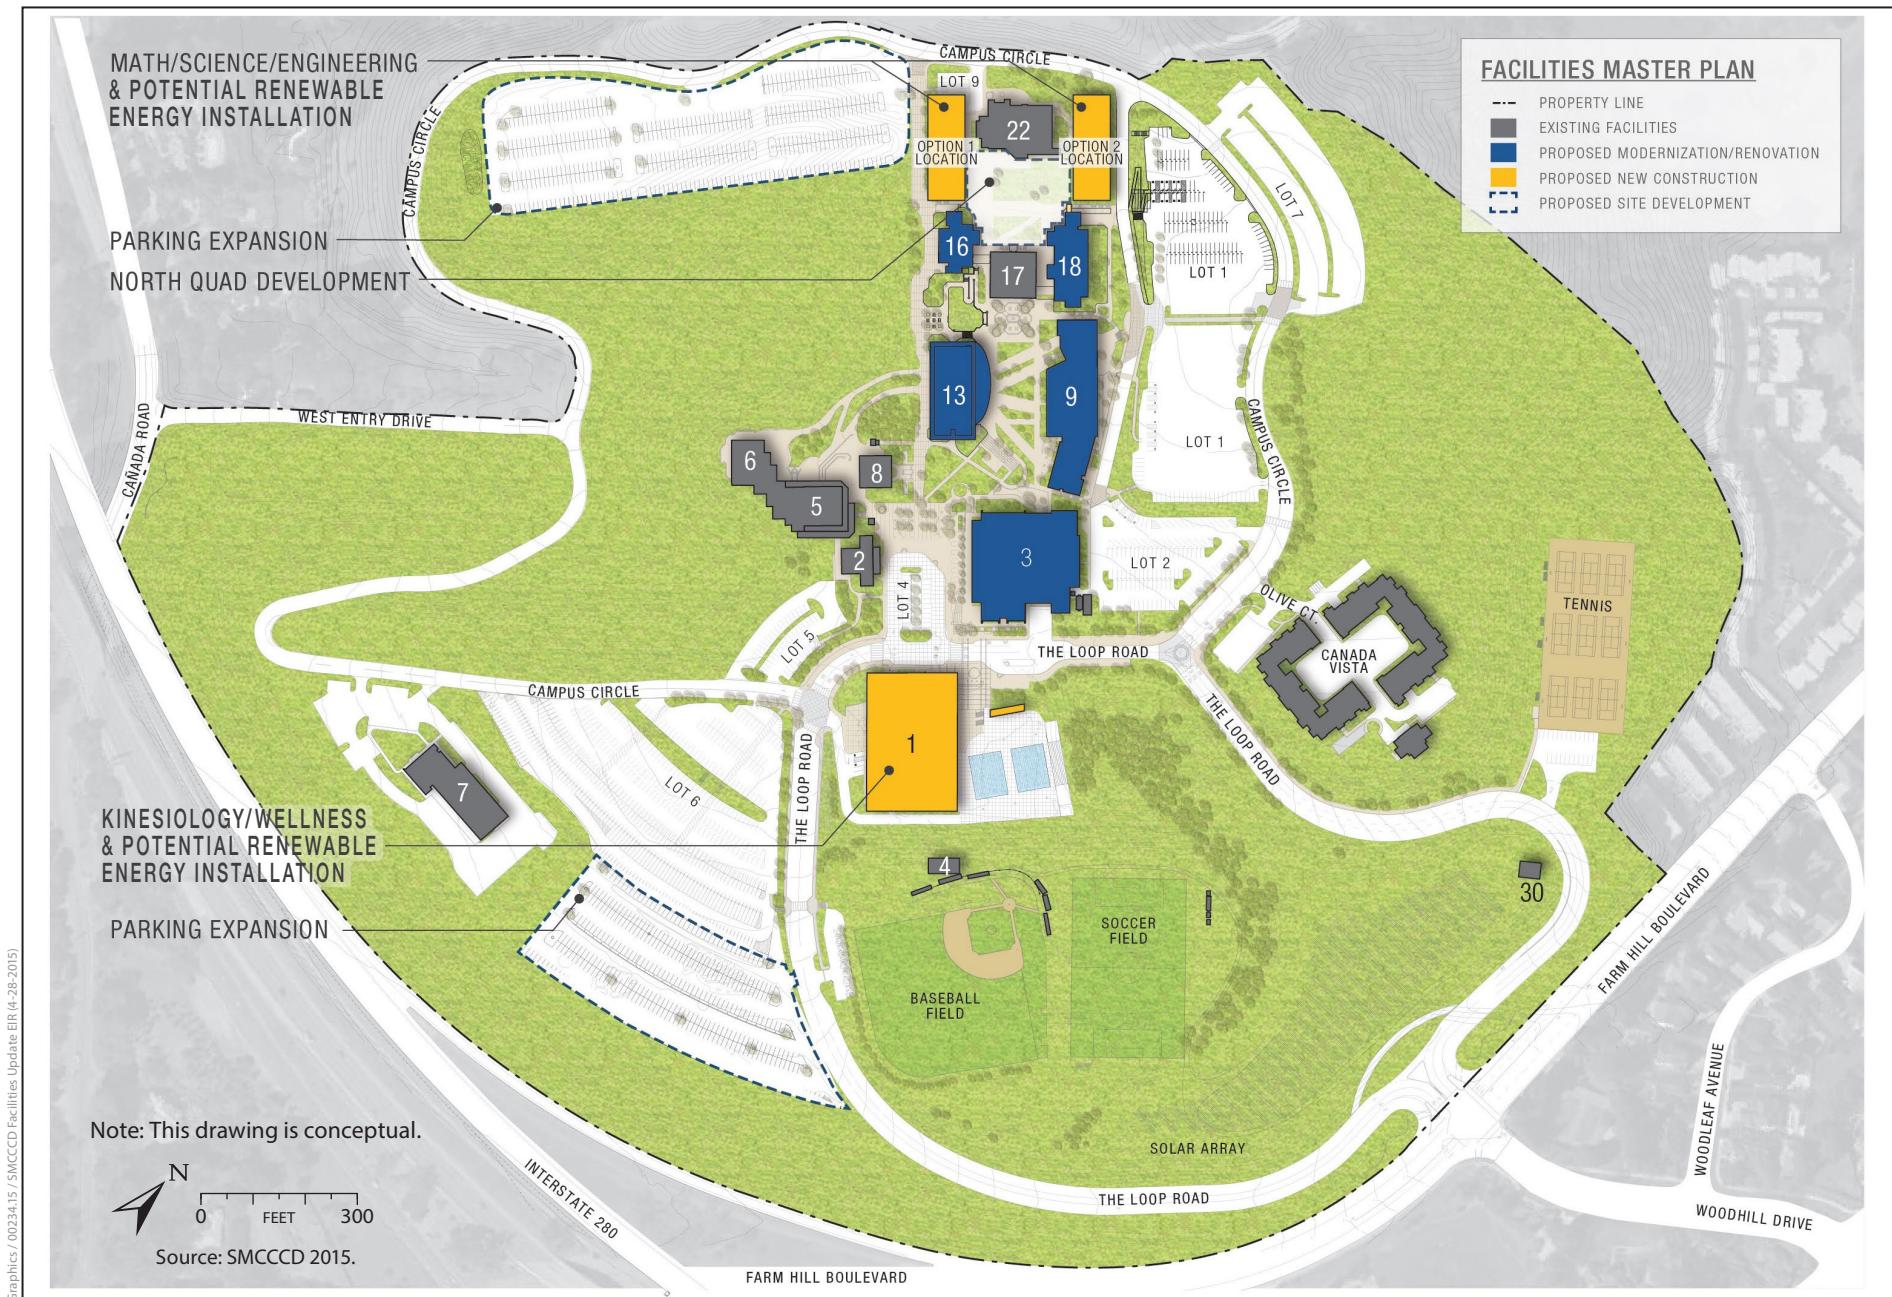

1. Identify significant environmental effects and mitigation measures that you believe need to be explored in the EIR with supporting discussion of why you believe these effects may be significant.
2. Describe special studies and other information that you believe are necessary for the District to analyze the significant environmental effects, alternatives, and mitigation measures you have identified.
3. For public agencies that provide infrastructure and public services, identify any facilities that will be required to provide services.
4. Indicate whether staff from your agency would like to meet with District staff to discuss the scope and content of the EIR's environmental information.
5. Provide the name, title, telephone number, postal, and email addresses of the contact person from your agency or organization that we can contact regarding your comments.
6. Identify alternatives that you believe need to be explored in further detail in the EIR.

Existing college campuses

**Project Description:** (please use a separate page if necessary)

San Mateo Community College District (District) has three campuses in San Mateo County, California including Cañada College in Redwood City and the Town of Woodside, College of San Mateo (CSM) in the City of San Mateo, and Skyline College in the City of San Bruno. The 2015 Facilities Master Plan Amendment would continue the modernization and renovation work that began with adoption of the District's 2001 and 2006 Facilities Master Plans. The 2015 Facilities Master Plan Amendment identifies planned improvements at the three campuses including, but not limited to: building modernization and renovation, building demolition, new building construction, tree removal, landscaping/pedestrian improvements, roadway construction/reconstruction, and changes in parking and roadway reconfiguration.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

## Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with an "X". If you have already sent your document to the agency please denote that with an "S".

## San Mateo County Community College District 2015 Facilities Master Plan Amendment

**SCH Number:** 2015052007**Document Type:** NOP - Notice of Preparation**Project Lead Agency:** San Mateo County Community College District

### Project Description

San Mateo Community College District has three campuses in San Mateo County, California including Canada College in Redwood City and the Town of Woodside, College of San Mateo (CSM) in the City of San Mateo, and Skyline College in the City of San Bruno. The 2015 Facilities Master Plan Amendment would continue the modernization and renovation work that began with adoption of the District's 2001 and 2006 Facilities Master Plans. The 2015 Facilities Master Plan Amendment identifies planned improvements at the three campuses including, but not limited to: building modernization and renovation, building demolition, new building construction, tree removal, landscaping/pedestrian improvements, roadway construction/reconstruction, and changes in parking and roadway reconfiguration.

### Contact Information

Barbara Christensen  
San Mateo County Community College District  
650-574-6560  
3401 CSM Drive  
San Mateo, CA 94402

### Project Location

County: San Mateo  
City: Redwood City, Woodside, San Mateo, San Bruno  
Region:  
Cross Streets: Farm Hill Boulevard; West Hillside Boulevard; Skyline Boulevard  
Latitude/Longitude:  
Parcel No:  
Township:  
Range:  
Section:  
Base:  
Other Location Info:

### Proximity To

Highways: I-280, SR 84, SR 92  
Airports:  
Railways:  
Waterways: Emerald Lake; Crystal Springs Reservoir; Pacific Ocean  
Schools: Various  
Land Use: Existing College Campuses

### Development Type

Residential, Educational (College facility improvements), Recreational (25 meter swimming pools (2) & health club), Water Facilities, Power: Other Power Type (Solar), Other (Parking lot expansion & roadway reconfiguration)

### Local Action

Redevelopment

### Project Issues

Aesthetic/Visual, Air Quality, Archaeologic-Historic, Biological Resources, Drainage/Absorption, Flood Plain/Flooding, Geologic/Seismic, Noise, Population/Housing Balance, Public Services, Recreation/Parks, Schools/Universities, Sewer Capacity, Soil Erosion/Compaction/Grading, Solid Waste, Toxic/Hazardous, Traffic/Circulation, Vegetation, Water Quality, Water Supply, Growth Inducing, Landuse, Cumulative Effects, Other Issues (GHG Emissions)

MSVar030  
SCH# 2015052007

Ms. Barbara Christensen  
San Mateo County Community College District  
3401 CSM Drive  
San Mateo, CA 94402

Dear Ms. Christensen:

**San Mateo County Community College District 2015 Facilities Master Plan Amendment –  
Notice of Preparation**

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above project. Caltrans' new mission, vision, and goals signal a modernization of our approach to California's transportation system; provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities of infill, conservation, and efficient development. We provide these comments consistent with the State's smart mobility goals that support a vibrant economy, and build communities, not sprawl. The following comments are based on the Notice of Preparation.

***Project Understanding***

The project identifies planned improvements at the San Mateo County Community College District's (District) three campuses. These improvements include but not limited to: building modernization and renovation, building demolition, new building construction, tree removal, landscaping/pedestrian improvements, and changes in the parking and roadways. The specific design and construction of campus projects would occur as projects are funded through the District's Capital Improvement Program.

***Traffic Impact Fees***

Please identify any Transportation Impact Fees associated with this proposed project. The scheduling and costs associated with planned improvements on the Caltrans right-of-way should be listed, in addition to identifying viable funding sources per General Plan Guidelines.

***Traffic Impact Study and Multi-Modal Transportation***

Please provide the following:

1. Mitigation for any roadway sections or intersections with increasing Vehicles Miles Travelled (VMT) need to be identified. Mitigation may include contribution to a regional fee program as applicable, and should support the use of transit and active transportation modes.
2. Impacts on pedestrians and bicyclists resulting from projected VMT increases need to be analyzed. The analysis should describe any pedestrian and bicycle mitigation measures and safety countermeasures needed to maintain and improve access to transit facilities and reduce vehicle trips.
3. Please consider pedestrian, bicycling, and transit performance or quality of service measures and modeling as a means of estimating the project impacts to these modes and evaluating mitigation measures and tradeoffs.
4. Include a Transportation Demand Management (TDM) Plan that will provide for appropriate documentation for monitoring TDM measures, including annual reports to demonstrate the ongoing reduction of vehicle trips while continuing to survey the travel pattern of employees and visitors.

***Vehicle Trip Reduction***

We encourage you to develop Travel Demand Management (TDM) policies to encourage usage of nearby public transit lines and reduce vehicle trips on the State Highway System. These policies could include lower parking ratios, car-sharing programs, preferential car/van pool parking, electric vehicle charging stations, bicycle parking and showers, shuttle services to transit, subsidized transit passes, and providing transit passes to students and employees.

For information about parking ratios, see the Metropolitan Transportation Commission (MTC) report *Reforming Parking Policies to Support Smart Growth* or visit the MTC parking webpage: [http://www.mtc.ca.gov/planning/smart\\_growth/parking/](http://www.mtc.ca.gov/planning/smart_growth/parking/).

In addition, secondary impacts on pedestrians and bicyclists resulting from any traffic impact mitigation measures should be analyzed. The analysis should describe any pedestrian and bicycle mitigation measures and safety countermeasures that would in turn be needed as a means of maintaining and improving access to transit facilities and reducing vehicle trips and traffic impacts on state highways.

Ms. Barbara Christensen/San Mateo Co. Community College District  
May 28, 2015  
Page 3

Please provide at least one hard copy and one CD of the environmental document including technical appendices as soon as they are available.

Please feel free to call or email Sandra Finegan at (510) 622-1644 or [sandra.finegan@dot.ca.gov](mailto:sandra.finegan@dot.ca.gov) with any questions regarding this letter.

Sincerely,

PATRICIA MAURICE  
District Branch Chief  
Local Development – Intergovernmental Review

CITY OF SAN BRUNO  
COMMUNITY DEVELOPMENT DEPARTMENT

June 5, 2015

Barbara Christensen  
Director of Community/Government Relations  
San Mateo County Community College District  
3401 CSM Drive  
San Mateo, CA 94402

Re: Notice of Preparation of an Environmental Impact Report for the San Mateo County Community College District 2015 Public Facilities Master Plan Amendment

Dear Ms. Christensen,

Thank you for notifying the City of San Bruno of the opportunity to comment on the scope and content of the Environmental Impact Report (EIR) being prepared for the San Mateo County Community College District 2015 Facilities Master Plan Amendment. All of the City's comments apply to the Skyline campus projects. The City has a particular interest making sure that the EIR evaluates potential environmental impacts that may affect surrounding neighborhoods, City infrastructure and public services:

1. Project Description. Describe the residential project at Skyline College as completely as possible, both the single family homes and multi-family staff/faculty housing, including the layout of streets and lots, approximate size of lots and units, estimated persons per household, and targeted household income.  
  
Describe the overall construction timeline for all projects on the Skyline campus.
2. Aesthetics. Evaluate the visual impacts of the proposed residential project, including appearance from College Drive and surrounding residences. Evaluate the compatibility of scale and design of the residential project(s) with the surrounding Pacific Heights residential neighborhood. Analyze the consistency of the new residential development with the City's zoning regulations and Residential Design Guidelines.
3. Geology and Soils. Skyline College is in proximity to San Andreas Fault and Alquist-Priolo Earthquake Fault Zone. Geotechnical and soils reports should evaluate the potential impacts of grading the residential subdivision and its potential impacts on the surrounding residential neighborhoods, storm drain infrastructure, and City streets.
4. Hazards and Hazardous Materials. Describe as thoroughly as possible the demolition component of the project, especially the demolition of the Social Science/Creative Arts Building 1 (78,000 square feet) and Building 19 (39,000 square feet), including timing, estimated tons of demolition and construction debris, hazardous materials, transport of debris, and planned haul routes through the City.

5. Noise and Vibration. Pay particular attention to impacts of construction noise, construction equipment, and transport of materials on surrounding residential neighborhoods.
6. Hydrology and Water Quality. This needs to be thoroughly analyzed with consideration given to the current California drought and recently adopted City of San Bruno water conservation measures.
7. Traffic. Analyze traffic impacts of construction equipment trips during the construction period as well as automobile trips from the completed residential project(s) at the following intersections: College/Marisol, College/Skyline, and College/Sharp Park Boulevard.

Describe and evaluate any TDM measures to encourage the use of creative and effective ways to reduce motor vehicle trips and their associated impacts created by new housing development as well as any increase in usage of expanded facilities. How might TDM measures mitigate GHG impacts?

Describe options for access to single family homes fronting College Drive and access options for faculty, users, studios, etc.

8. Utilities Systems and Public Services. Evaluate potential impacts on City sewer, water, and storm drain infrastructure and capacity. Evaluate potential impacts on public services provided by the City, including Police, Fire protection, Water, Sewer, and Parks.

Thank you for the opportunity to comment on the scope of issues to be analyzed in the EIR. Should you have any questions regarding the City's comments, please do not hesitate to contact me at (650) 616-7053 or at [msullivan@sanbruno.ca.gov](mailto:msullivan@sanbruno.ca.gov).

Sincerely,

Mark Sullivan, AICP

The Town of  
Woodside

June 8, 2015

San Mateo County Community College District  
Attention: Barbara Chirstensen  
3401 CSM Drive  
San Mateo, CA 94402

**RE: NOP OF AN EIR FOR THE SAN MATEO COUNTY  
COMMUNITY COLLEGE DISTRICT 2015 FACILITIES MASTER  
PLAN AMENDMENT**

Dear Barbara:

Thank you for sending the Town of Woodside the Notice of Preparation (NOP) for the 2015 Facilities Master Plan Amendment. At this stage in the process, the environmental impact which could have the greatest impact on Woodside is the replacement of Building 1 with a new Kinesiology/Wellness building. Currently, Building 1 is visible upon entering Woodside on Interstate 280, a state scenic highway. Replacement of this building is an opportunity to improve the visual impression when one looks toward the Cañada College campus. I note that the NOP indicates aesthetic analysis will be done as part of the EIR process. Attached to this letter are two pages from the Town of Woodside's General Plan which identify all of the Town's scenic corridors. This information should be considered when conducting the aesthetic analysis.

P.O. Box 620005  
2955 Woodside Road  
Woodside CA 94062

With a new, public Kinesiology/Wellness facility, which is proposed to be open to the public, it is important that the traffic generation and traffic patterns are carefully analyzed, as both entrances to the College, off of Farm Hill Boulevard and Cañada Road, are within the Town of Woodside. On Cañada Road particularly, any substantial increase in use of the entrance could have an impact on the rural nature of the road and the Town.

I would appreciate a meeting as you begin this process to better understand any details you have on the Facilities Master Plan Amendment, and in particular what the District may have in mind for the design of the Kinesiology/Wellness building.

If you have any questions about these comments, please feel free to contact me at (650) 851-6790 or kbryant@woodsidetown.org.

Sincerely,

  
Kevin Bryant  
Town Manager

## SCENIC HIGHWAYS AND ROADS

Woodside's scenic highways and roads (see Map CL2, Scenic Corridors) provide vistas which enhance perception of the rural and natural character of the Town.

Designated scenic roads in the Woodside Planning Area include State scenic highways, county scenic roads, and Town scenic roads.

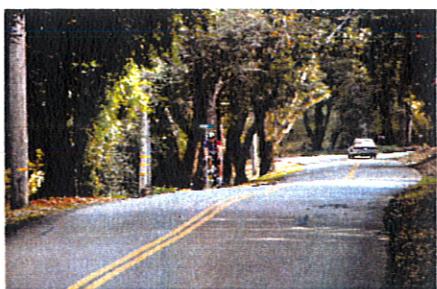

State scenic highways are officially designated by the State. Two significant segments of designated State Scenic Highways are Skyline Boulevard (State Highway 35) and Junipero Serra Freeway (Interstate 280).

County scenic roads are officially designated by the County of San Mateo. No County scenic roads are located within Town limits, but a portion of the Cañada Road County Scenic Corridor exists north of the Town's corporate limits within the Woodside Planning Area.

Town scenic roads are officially designated by the Woodside Town Council, and include:

- Cañada Road
- Kings Mountain Road
- La Honda Road
- Mountain Home Road
- Portola Road
- Sand Hill Road
- Whiskey Hill Road
- Woodside Road (State Highway 84)

### SCENIC CORRIDOR PROTECTION

Scenic Road.

Pursuant to the Woodside Municipal Code (WMC), development that meets any of the following criteria is subject to review by either staff, the Architectural and Site Review Board, or the Planning Commission, depending on size and location:

- Located within State scenic corridors, or
- Located within 1,000 feet and visible from the driving surface of Town scenic roads, or
- Located on ridge tops visible from designated scenic highways and roads.
- The WMC also sets forth special setback requirements for properties within scenic corridors.

## CIRCULATION SYSTEM MAINTENANCE

Circulation system maintenance in Town includes maintaining and improving Town roads, bikeways, pedestrian pathways, pedestrian trails, and equestrian trails.

The Woodside Municipal Code, Title 3, Administration, describes the basis and requirements for the Road Program of the Town of Woodside, including design parameters, funding sources, prioritization of work, reporting, and the requirement to solicit input from Town residents and committees. This Program applies to work within Town rights-of-way.

Funding sources for transportation improvements within Town rights-of-way (roadways, bikeways, and pedestrian paths) include General Fund monies, State gas taxes, Measure A taxes, traffic safety fines and forfeitures, and road impact fees. Trails Maintenance Fees, collected annually, and General Fund monies are used to maintain public trails within Town rights-of-way and off-road trails within dedicated easements. Occasionally, State and federal grant monies are secured for circulation system improvements.

---

**b. Improve Road Safety**

1. Respond to safety issues on public road rights-of-way, such as hazardous pavement conditions, hindrances to sight distance, roadway obstructions, and trees that are structurally defective or damaging infrastructure. The Town has no current plans for the construction of new public roads.
2. Safety improvements on private roads are the responsibility of the private property owners. Utilize available means to require or encourage adequate safety features on private roadways.
3. Review substandard roadway widths and identify and prioritize potential improvements.

**c. Maintain roadways**

1. Monitor the condition of Town roads, and prioritize preventive maintenance.
2. The maintenance of private roads shall be the responsibility of the private property owners. All newly constructed private roads shall require the recordation of a private road maintenance agreement.

---

**POLICY CL2.2 - PROTECT AND DESIGNATE SCENIC CORRIDORS**

State scenic highway legislation does not prohibit development projects within officially designated scenic corridors. The only prohibited structures are outdoor advertising signs. State guidelines do, however, require the adoption of scenic corridor architectural regulations by local governments for those portions of scenic corridors within their jurisdictions. In Woodside, these regulations are extended to local scenic roads.

---

**Strategies:****a. Development review**

1. Skyline Boulevard and I-280 are official State Scenic Highways and the scenic corridors along these roads have been defined. Local regulation of development within these scenic corridors, including design review, must be continued in order to maintain official State scenic highway status and to accomplish Town objectives.
2. Continue Architectural and Site Plan Review of all structures and site developments proposed in the scenic corridors along designated State scenic highways and Town scenic roads to ensure appropriateness of design and materials, proper placement of structures, and landscape design.
3. Continue zoning and subdivision regulations in force requiring adequate setbacks of all structures from road rights-of-way and other measures to protect the scenic qualities in all scenic corridors.

**b. Scenic corridor designation for State Highway 84**

In addition to Skyline Boulevard and I-280, State Highway 84 is indicated in this Plan as a local scenic highway and is recommended to the State for inclusion in the State Scenic Highway System. The Town will continue to seek official State scenic highway status for Highway 84.

## SMCCCD - Skyline College Residential Development

### Trip Generation Estimates

Land Use	Size	Units	Daily Rates	Daily Trips	AM Peak Hour						PM Peak Hour					
					Pk-Hr Rate	Splits		In	Out	Total	Pk-Hr Rate	Splits		In	Out	Total
Multi-family building for faculty and staff <sup>1</sup>	24	DUs	6.65	160	0.51	0.20	0.80	2	10	12	0.62	0.65	0.35	10	5	15
Single-family homes for general public <sup>2</sup>	47	DUs	9.52	447	0.75	0.25	0.75	9	26	35	1.00	0.63	0.37	30	17	47
<b>New Trips Generated</b>				<b>607</b>				<b>11</b>	<b>36</b>	<b>47</b>				<b>40</b>	<b>22</b>	<b>62</b>
<i>New trips distributed on-site (Skyline College)<sup>3</sup></i>				30				1	5	6				5	3	8
<i>New trips distributed off-site</i>				577				10	31	41				35	19	54

Notes:

DUs = dwelling units

<sup>1</sup> Trip rates based on Apartment (Land Use 220), ITE Trip Generation, 9th Edition, 2012. Average rates are used.

<sup>2</sup> Trip rates based on Single-Family Detached Housing (Land Use 210), ITE Trip Generation, 9th Edition, 2012. Average rates are used.

<sup>3</sup> It is assumed that 50 percent of the multi-family residential units would be occupied by Skyline College faculty and staff (on-site) and remaining units would be occupied by Canada College and College of San Mateo faculty and staff (off-site).

## SMCCCD - Canada College Gym Facility

All Members <sup>5</sup>	5,380	0.13	716	0.02	62%	38%	66	41	107	0.02	59%	41%	74	51	125
<b>Notes:</b>															
Table developed by Hexagon Transportation Consultants.															
1. Based on 2015 January Check-Ins Data collected by SMCCCD. There were 5,380 members as of January 2015.															
2. AM peak hour check-ins & -outs include 84 check-ins in 8-9 am and 52 check-ins in 7-8 am which was assumed to exit in 8-9 am.															
3. PM peak hour check-ins & -outs include 94 check-ins in 5-6 pm and 65 check-ins in 4-5 pm which was assumed to exit in 5-6 pm.															
4. It was assumed that faculty, staff, and student members go to the club before and after work or school, so they don't generate additional vehicle trips.															
Therefore, check-ins were calculated for the general public (GP) members, using the ratio of GP members to all members.															
5. Daily and peak-hour trip rates were calculated using check-ins from GP members. It is assumed one vehicle trip per check-in.															

## MEMBERS Through January 2015

Sacramento, California 95825

April 14, 2015

Document Number: 150414115703

Eric Christensen  
ICF International  
620 Folsom St. 2nd Floor  
San Francisco, CA 94107

Subject: Not specified

Dear: Mr. Christensen

We are sending this official species list in response to your April 14, 2015 request for information about endangered and threatened species. The list covers the California counties and/or U.S. Geological Survey 7½ minute quad or quads you requested.

Our database was developed primarily to assist Federal agencies that are consulting with us. Therefore, our lists include all of the sensitive species that have been found in a certain area *and also ones that may be affected by projects in the area*. For example, a fish may be on the list for a quad if it lives somewhere downstream from that quad. Birds are included even if they only migrate through an area. In other words, we include all of the species we want people to consider when they do something that affects the environment.

Please read Important Information About Your Species List (below). It explains how we made the list and describes your responsibilities under the Endangered Species Act.

Our database is constantly updated as species are proposed, listed and delisted. If you address proposed and candidate species in your planning, this should not be a problem. However, we recommend that you get an updated list every 90 days. That would be July 13, 2015.

Please contact us if your project may affect endangered or threatened species or if you have any questions about the attached list or your responsibilities under the Endangered Species Act. A list of Endangered Species Program contacts can be found [here](#).

### Quad Lists

#### Listed Species

##### Invertebrates

- Euphydryas editha bayensis*  
bay checkerspot butterfly (T)  
Critical habitat, bay checkerspot butterfly (X)

##### Fish

- Eucyclogobius newberryi*  
tidewater goby (E)
- Hypomesus transpacificus*  
delta smelt (T)
- Oncorhynchus kisutch*  
coho salmon - central CA coast (E) (NMFS)
- Oncorhynchus mykiss*  
Central California Coastal steelhead (T) (NMFS)  
Central Valley steelhead (T) (NMFS)  
Critical habitat, Central California coastal steelhead (X) (NMFS)
- Oncorhynchus tshawytscha*  
Central Valley spring-run chinook salmon (T) (NMFS)  
winter-run chinook salmon, Sacramento River (E) (NMFS)

##### Amphibians

- Ambystoma californiense*  
California tiger salamander, central population (T)
- Rana draytonii*  
California red-legged frog (T)  
Critical habitat, California red-legged frog (X)

##### Reptiles

- Thamnophis sirtalis tetradenia*  
San Francisco garter snake (E)

##### Birds

- Brachyramphus marmoratus*  
Critical habitat, marbled murrelet (X)  
marbled murrelet (T)
- Charadrius alexandrinus nivosus*

western snowy plover (T)

*Pelecanus occidentalis californicus*

California brown pelican (E)

*Rallus longirostris obsoletus*

California clapper rail (E)

*Sternula antillarum (=Sterna, =albifrons) browni*

California least tern (E)

## Mammals

*Reithrodontomys raviventris*

salt marsh harvest mouse (E)

## Plants

*Acanthomintha duttonii*

San Mateo thornmint (E)

*Cirsium fontinale var. fontinale*

fountain thistle (E)

*Hesperolinon congestum*

Marin dwarf-flax (=western flax) (T)

*Pentachaeta bellidiflora*

white-rayed pentachaeta (E)

*Trifolium amoenum*

showy Indian clover (E)

## Quads Containing Listed, Proposed or Candidate Species:

PALO ALTO (428B)

WOODSIDE (429A)

---

## County Lists

No county species lists requested.

## Key:

(E) *Endangered* - Listed as being in danger of extinction.

(T) *Threatened* - Listed as likely to become endangered within the foreseeable future.

(P) *Proposed* - Officially proposed in the Federal Register for listing as endangered or threatened.

(NMFS) Species under the Jurisdiction of the [National Oceanic & Atmospheric Administration Fisheries Service](#). Consult with them directly about these species.

*Critical Habitat* - Area essential to the conservation of a species.

(PX) *Proposed Critical Habitat* - The species is already listed. Critical habitat is being proposed for it.

(C) *Candidate* - Candidate to become a proposed species.

(V) Vacated by a court order. Not currently in effect. Being reviewed by the Service.

(X) *Critical Habitat* designated for this species

## Important Information About Your Species List

### How We Make Species Lists

We store information about endangered and threatened species lists by U.S. Geological Survey 7½ minute quads. The United States is divided into these quads, which are about the size of San Francisco.

The animals on your species list are ones that occur within, **or may be affected by** projects within, the quads covered by the list.

- Fish and other aquatic species appear on your list if they are in the same watershed as your quad or if water use in your quad might affect them.
- Amphibians will be on the list for a quad or county if pesticides applied in that area may be carried to their habitat by air currents.
- Birds are shown regardless of whether they are resident or migratory. Relevant birds on the county list should be considered regardless of whether they appear on a quad list.

## Plants

Any plants on your list are ones that have actually been observed in the area covered by the list. Plants may exist in an area without ever having been detected there. You can find out what's in the surrounding quads through the California Native Plant Society's online [Inventory of Rare and Endangered Plants](#).

## Surveying

Some of the species on your list may not be affected by your project. A trained biologist and/or botanist, familiar with the habitat requirements of the species on your list, should determine whether they or habitats suitable for them may be affected by your project. We recommend that your surveys include any proposed and candidate species on your list. See our [Protocol](#) and [Recovery Permits](#) pages.

For plant surveys, we recommend using the [Guidelines for Conducting and Reporting Botanical Inventories](#). The results of your surveys should be published in any environmental documents prepared for your project.

## Your Responsibilities Under the Endangered Species Act

All animals identified as listed above are fully protected under the Endangered Species Act of 1973, as amended. Section 9 of the Act and its implementing regulations prohibit the take of a federally listed wildlife species. Take is defined by the Act as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect" any such animal.

Take may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, or shelter (50 CFR §17.3).

Take incidental to an otherwise lawful activity may be authorized by one of two procedures:

- If a Federal agency is involved with the permitting, funding, or carrying out of a project that may result in take, then that agency must engage in a formal [consultation](#) with the Service.

During formal consultation, the Federal agency, the applicant and the Service work together to avoid or minimize the impact on listed species and their habitat. Such consultation would result in a biological opinion by the Service addressing the anticipated effect of the project on listed and proposed species. The opinion may authorize a limited level of incidental take.

- If no Federal agency is involved with the project, and federally listed species may be taken as

part of the project, then you, the applicant, should apply for an incidental take permit. The Service may issue such a permit if you submit a satisfactory conservation plan for the species that would be affected by your project.

Should your survey determine that federally listed or proposed species occur in the area and are likely to be affected by the project, we recommend that you work with this office and the California Department of Fish and Game to develop a plan that minimizes the project's direct and indirect impacts to listed species and compensates for project-related loss of habitat. You should include the plan in any environmental documents you file.

## Critical Habitat

When a species is listed as endangered or threatened, areas of habitat considered essential to its conservation may be designated as critical habitat. These areas may require special management considerations or protection. They provide needed space for growth and normal behavior; food, water, air, light, other nutritional or physiological requirements; cover or shelter; and sites for breeding, reproduction, rearing of offspring, germination or seed dispersal.

Although critical habitat may be designated on private or State lands, activities on these lands are not restricted unless there is Federal involvement in the activities or direct harm to listed wildlife.

If any species has proposed or designated critical habitat within a quad, there will be a separate line for this on the species list. Boundary descriptions of the critical habitat may be found in the Federal Register. The information is also reprinted in the Code of Federal Regulations (50 CFR 17.95). See our [Map Room](#) page.

## Candidate Species

We recommend that you address impacts to candidate species. We put plants and animals on our candidate list when we have enough scientific information to eventually propose them for listing as threatened or endangered. By considering these species early in your planning process you may be able to avoid the problems that could develop if one of these candidates was listed before the end of your project.

## Species of Concern

The Sacramento Fish & Wildlife Office no longer maintains a list of species of concern. However, various other agencies and organizations maintain lists of at-risk species. These lists provide essential information for land management planning and conservation efforts.

[More info](#)

## Wetlands

If your project will impact wetlands, riparian habitat, or other jurisdictional waters as defined by section 404 of the Clean Water Act and/or section 10 of the Rivers and Harbors Act, you will need to obtain a permit from the U.S. Army Corps of Engineers. Impacts to wetland habitats require site specific mitigation and monitoring. For questions regarding wetlands, please contact Mark Littlefield of this office at (916) 414-6520 .

## Updates

Our database is constantly updated as species are proposed, listed and delisted. If you address proposed and candidate species in your planning, this should not be a problem. However, we recommend that you get an updated list every 90 days. That would be

February 18, 2014.

## Appendix D

# Cultural Resources Background Information and Documentation

---

**Appendix D-1:** Regional Background Conditions

**Appendix D-2:** CSM Photographic Record

**Appendix D-3:** Previous DPR Form

**Appendix D-4:** Native American Correspondence

## **Regional Background Conditions**

---

This appendix summarizes prehistoric, ethnographic, geoarchaeological, and historical contexts of the Project site and surrounding lands. This summary of the regional conditions is based on previous reports and other secondary sources.

## Prehistoric Setting

This appendix summarizes prehistoric, ethnographic, geoarchaeological, and historical contexts of the Project site and surrounding lands. This summary of the regional conditions is based on previous reports and other secondary sources.

The entire Bay Area was a region of intense human occupation long before the European explorers settled in the region in the eighteenth century. In the early twentieth century, the prehistory of the region was virtually unknown, aside from a small amount of ethnographic information (Kroeber 1925) and the discovery of a few prehistoric sites at the south end of the San Francisco Bay (Nelson 1909). Because of the intense and rapid urban development in the Bay Area during the late nineteenth and early twentieth centuries, many archaeological resources were damaged or destroyed before scientific inquiry could be conducted. Many of the archaeological excavations in this region have been salvage efforts, often conducted without the time or resources necessary to perform adequate data recovery and professional reporting. However, over the past several years, the understanding of this region's prehistory has changed, partly because of intensive fieldwork resulting from compliance with environmental laws.

Milliken et al. (2007) present a series of culture changes in the Bay Area. The period of occupation during the cal 11,500 to 8000 B.C., when Clovis big-game hunters, then initial Holocene gatherers, presumably lived in the area, lacks evidence, because such evidence has likely been washed away by stream action, buried under more recent alluvium, or submerged on the continental shelf (Rosenthal and Meyer 2004:1). There is evidence, however, that an in-place forager economic pattern began around cal 8000 B.C., and was followed by five cycles of change that began at approximately cal 3500 B.C.

### Early Holocene (Lower Archaic), cal 8000–3500 B.C.

Between cal 8000 and 3500 B.C., the Bay Area appears to have been occupied by a widespread but sparse population of hunter-gatherers. The millingslab and handstone, as well as a variety of large, wide-stemmed and leaf-shaped projectile points, all emerged during this period (Milliken et al. 2007:114). Local Franciscan chert dominated the Early Holocene Santa Clara Valley components (Hylkema 2002:235). Radiocarbon determinations from a feature and an *Olivella biplicata* spire-lopped bead indicate the presence of cultural materials dating as early as 7500 cal B.C. (Fitzgerald and Porcasi 2003; Fitzgerald et al. 2005).

### Early Period (Middle Archaic), cal 3500–500 B.C.

Several technological and social developments characterize this period in the Bay Area. Rectangular *Haliotis* and *Olivella* shell beads, the markers of the Early Period bead horizon, continued in use until

at least 2,800 years ago (Ingram 1998; Wallace and Lathrop 1975:19). The mortar and pestle were first documented in the Bay Area shortly after 4000 B.C., and by 1500 cal B.C., cobble mortars and pestles, and not millingslabs and handstones, were used at sites throughout the Bay Area, including ALA-483 (Livermore Valley) (Wiberg 1996:373).

### **Lower Middle Period (Initial Upper Archaic), cal 500 B.C.–cal A.D. 430**

Although it is unclear when the “major disruption in symbolic integration systems” originated, it is clear in the record around 500 B.C. and may have begun several hundred years earlier (Milliken et al. 2007:115). Rectangular shell beads disappeared from the Bay Area, Central Valley, and portions of Southern California during this time; and a whole new suite of decorative and presumed religious objects appeared during the Early Period-Middle Period Transition (EMT) (Elsasser 1978), which corresponds to the beginning of this period. Net sinkers, a typical early period marker throughout the bay, disappeared from most sites, with the exception of SFR-112, where they continued in use well into the Middle Period (Pastron and Walsh 1988:90).

### **Upper Middle Period (Late Upper Archaic), A.D. cal 430–1050**

Around 430 A.D., the *Olivella* saucer bead trade network collapsed, and over half of known bead horizon M1 sites were abandoned, while the remaining sites saw a large increase in sea otter bones. Additionally, the Meganos extended burial mortuary pattern began to spread in the interior East Bay (Bennyhoff 1994a, 1994b), and the Meganos mortuary complex spread from the interior into the Santa Clara Valley at Wade Ranch (SCL-302) (Milliken et al. 2007:116).

### **Initial Late Period (Lower Emergent), A.D. CAL 1050–1550**

Fredrickson (1973) coined the term “Emergent” to describe this period, in recognition of the appearance of a new level of sedentism, status ascription, and ceremonial integration in lowland central California. Obsidian production and mortuary practices showed evidence of increased social stratification after 1250 A.D., and while the quantity of burial items decreased, the quality of these items, particularly in high-status burials and cremations, increased (Fredrickson 1994:62). This development may have reflected a new regional ceremonial system that was the precursor of the ethnographic Kuksu cult, a ceremonial system that unified the many language groups around the Bay during this period (Fredrickson 1974:66; Bennyhoff 1994b). In the San Jose and Point Año Nuevo Localities, local Franciscan chert remained the primary production material for debitage and casual tools, and Napa Valley obsidian remained the primary production material for projectile points (Bellifemine 1997:124–136; Clark and Reynolds 2003:8; Hylkema 2002:250).

### **Terminal Late Period: Protohistoric Ambiguities**

Changes in artifact types and mortuary objects characterized A.D. cal 1500–1650. The signature *Olivella* sequin and cup beads of the central California L1 Bead Horizon abruptly disappeared, and clamshell disk beads, markers of the L2 Bead Horizon, spread across the North Bay (Milliken et al. 2007:117). Simple corner-notched points began to appear in the Central Bay, while Desert side-notched points spread into the South Bay from the Central Coast (see Hylkema 2002; Jackson 1986, 1989; Jurmain 1983).

Another upward cycle of regional integration was commencing when it was interrupted by Spanish settlement in the Bay Area beginning in 1776. Such regional integration was a continuing

characteristic of the Augustine Pattern, most likely brought to the Bay Area by Patwin speakers from Oregon, who introduced new tools (such as the bow) and traits (such as pre-internment grave pit burning) into central California. Perhaps the Augustine Pattern, with its inferred shared regional religious and ceremonial organization, was developed as a means of overcoming insularity, not in the core area of one language group but in an area where many neighboring language groups were in contact (Milliken et al. 2007:118).

## Ethnographic Setting

At the time of European contact, the Bay Area was occupied by a group of Native Americans whom ethnographers refer to as the Ohlone or Costanoan. The Ohlone are a linguistically defined group composed of several autonomous tribelets that spoke eight different but related languages. The Ohlone languages, together with Miwok, compose the Utian language family of the Penutian stock. The territory of the Ohlone people extended along the coast from the Golden Gate in the north to just below Carmel to the south, and as far as 60 miles inland. The territory encompassed a lengthy coastline, as well as several inland valleys (Levy 1978:485–486).

All three campuses lie within the tribal group known as the Pruristac; this name also refers to their village in San Pedro Valley on the Pacific Coast just south of San Francisco. Numerous Mission San Francisco baptismal entries name “Pruristac, alias San Pedro.” Pruristac and Timigtac, just a few miles north on the coast at the present town of Rockaway Beach, were inhabited by small groups of closely interrelated families. Like the people of nearby Urebure to the east, they seem to have been independent bands, rather than members of a large, multi-village tribe. The Mission San Francisco outstation of San Pedro was constructed at Pruristac during the mid-1780s (Milliken 1995:251).

The Ohlone were hunter-gatherers and relied heavily on acorns and seafood. They also exploited a wide range of other foods, including various seeds (the growth of which was promoted by controlled burning), buckeye, berries, roots, land and sea mammals, waterfowl, reptiles, and insects. The Ohlone used tule balsas for watercraft, and bow and arrow, cordage, bone tools, and twined basketry to procure and process their foodstuffs (Levy 1978:491–493).

Prior to contact, the Ohlone were politically organized by tribelet, with each having a designated territory. A tribelet consisted of one or more villages and camps within a territory designated by physiographic features. This type of organization was prevalent in pre-contact California (Kroeber 1925). Duties of the chief included providing for visitors and directing ceremonial activities. The chief also served as the leader of a council of elders that functioned primarily in an advisory capacity to the community (Harrington 1933:3).

Seven Spanish missions were founded in Ohlone territory between 1776 and 1797. While living within the mission system, the Ohlone commingled with other groups, including the Esselen, Yokuts, Miwok, and Patwin. Mission life was devastating to the Ohlone population (Milliken 1995). It has been estimated that in 1776, when the first mission was established in Ohlone territory, the Ohlone population numbered around 10,000. By 1832, the Ohlones numbered less than 2,000 as a result of introduced disease, harsh living conditions, and reduced birth rates (Cook 1943a, 1943b).

Under the Mexican government, secularization of the mission lands began in earnest in 1834. The indigenous population scattered away from the mission centers, and the few that were given rancherias from the mission lands were ill-equipped to maintain or work their land. Most of the former mission land was divided among loyal Mexican subjects, and the Ohlone who chose to

remain in their ancestral territory usually became squatters. Some were given jobs as manual laborers or domestic servants on Mexican ranchos or, later, American cattle ranches. During the next few decades, there was a partial return to aboriginal religious practices, particularly shamanism, and some return to food collection as a means of subsistence. Consequently, several multiethnic Indian communities (consisting of individuals of Chochenyo, Plains Miwok, Northern Valley Yokuts, Patwin, and/or Coast Miwok descent) were established in the mid-nineteenth century within Ohlone territory (Levy 1978:487).

Ohlone recognition and assertion began to move to the forefront during the early twentieth century, enforced by two legal suits brought against the U.S. government by Indians of California (1928–1964) for reparation due them for the loss of traditional lands. A review of what was known about Indians for the entire state of California commenced, and the political organizing necessary to mount this action on the part of Indians led to the formation of political advocacy groups throughout the state. The Ohlone participated, and a new roll of descendants was established, bringing a new focus on the community and reevaluation of rights due its members (Bean 1994:xxiv). Although they have yet to receive formal recognition from the federal government, the Ohlone are becoming increasingly organized as a political unit, and have an active interest in preserving their ancestral heritage and advocating for Native American issues.

## **Historic Setting**

### **Early History: Spanish and Mexican Era**

Explorer Sebastian Vizcaino visited the San Mateo County region as early as 1602 when he sailed along the California coast in search of a suitable harbor for Spain. In 1769, Gaspar de Portola and his party traveled through the area in the vicinity of present-day Half Moon Bay, Woodside, and Monterey Bay. Other visitors included Fernando de Rivera y Moncada and Juan Bautista de Anza, who explored portions of the county in 1774 and in 1776, respectively (Kyle 1990).

By the early 1800s, two Mexican ranchos, including Rancho San Mateo and Rancho de las Pulgas, encompassed the present-day city of San Mateo, and Rancho Buri Buri the present day cities of San Bruno and Millbrae. After the rancho period ended in the mid-1800s, put largely in motion by the discovery of gold and the subsequent gold rush of 1849, they were subdivided into smaller parcels and settled. In 1864, the San Francisco & San Jose Rail Road Company (later Southern Pacific Railroad Company) laid an alignment that linked San Francisco and San Jose, stopping in the new township of San Mateo. The railroad also opened San Mateo County to the residents of San Francisco who wished to establish summer residences in the country. These estates were largely self-sufficient, working farms, and some had their own services, such as general stores, blacksmith shops, livery stables, saloons, and hotels. The San Mateo region gradually developed over the years and eventually featured several businesses, churches, and schools. The City of San Mateo, in which the CSM campus is located, incorporated in 1894 (Cerny 2007; Shoecraft 1989). Cañada College campus is located mostly in the Town of Woodside which was incorporated in 1956, but settlement and growth of the town dates back to the 1880s. A small northeastern portion of Cañada College is in the City of Redwood City which was incorporated in 1897 (Cerny 2007).

The City of San Bruno, in which the Skyline College campus is located, was incorporated in 1914. During much of the late nineteenth century, San Bruno consisted of a few farms and roadhouses. The city began to develop in earnest after the 1906 earthquake and fire that destroyed much of San Francisco. San Bruno began to grow as a suburban community. In 1927, Mills field was dedicated as

an airport near the site now occupied by San Francisco International Airport. Although owned and operated by the City and County of San Francisco, the airport is an influential part of San Bruno's economy (Cerny 2007; Shoecraft 1989).

All three campuses are located within the County of San Mateo, which was organized in 1856 from portions of San Francisco County. The City of Belmont served as the original County seat, but in 1856 the seat moved to the City of Redwood City (Kyle 1990).

- d. **UTM:** **Zone:**
- \*e. **Other Locational Data:** (e.g., parcel #, directions to resource, elevation, etc., as appropriate): The Fine and Performing Arts Building is located at the far northeast corner of the hilltop campus. APN 038-281-360.

\*P3a. **Description:**

The property consists of a two to three-story reinforced concrete fine arts complex designed in the Formal Modern Classical style of architecture, characterized by a central plaza surrounded on three sides by two-story classrooms and a two-story arcade formed by a series of square concrete columns that terminate on a flat roof that connects the two opposing buildings. In the front, or to the east of the arcaded entrance to the plaza, is a trapezoidal fountain and pool set in a low concrete foundation. On opposite sides of the poured concrete plaza surrounding the fountain are a series of free-standing arched pergolas of concrete that form the central space. The inside of the plaza, which stands two-stories tall, features the main entrance to the theater facing east and the Music and Art wings. All three elevations feature banks of pointed arched windows running from the ground floor to the ceiling, all of which provides extraordinary views outward towards the interior plaza. The building itself is sited atop a flat terrace with sloping sides to the north and south respectively. The east arched entrance to the plaza is flanked by smooth painted concrete walls surfaces lacking fenestration, but embellished by an exaggerated flat roof that extends well beyond the wall plane of the building. The side elevations of the building feature two rows of anodized aluminum windows with four windows per bank, having two lights per window with the top windows forming a v-shaped arch created by an elliptical roof that wraps around the building. Between the banks of windows are slightly textured concrete panels. The building returns inward on both its north and south elevations, featuring plain concrete panel walls that extend to the west forming the theater with the one-story sculpture and ceramics building on the far northwest end of the theater. An abstract stairway leads to the upper floors of the theater building along its northwest elevation, featuring two trapezoidal vertical slabs of concrete that mimic the fountain on the south of the building complex. Paneled concrete walls and banks of anodized aluminum windows finish the western end of the building, along with a tower extending upward for nearly four-stories. The far west elevation generally lacks fenestration, characterized by flat paneled concrete walls and the same roof profile. Unlike the east elevation, which is dominated by a hardscape, benches, and a fountain, the north and south elevations are surrounded by lawns.

\*B10. **Significance: Theme:** Modern Formal/Classical/Abstract Architecture and Education    Area: San Francisco Bay Area/San Mateo  
Period of Significance: 1963      Property Type: Educational Building      Applicable Criteria: A, B and C

The historic context for the subject property reflects the post World War II expansion of San Mateo. During the Spanish Colonial period, Mission Dolores established a farming outpost and wayside hospice halfway down El Camino Real to San Jose in the area of present-day San Mateo. In the era of the ranchos, San Mateo became a stage stop. By 1863, the San Francisco-San Jose Railroad reached San Mateo, which boasted a waterfront and shipping industry. The city was platted and laid out by C. B. Polhemus in 1863 (Gudde 1969:290). In 1894, San Mateo was incorporated and by 1900, the population reached 1,832. The growth of San Mateo was slow, due to the disinclination of the wealthy San Franciscans west of the town, who built huge estates in Hillsborough, to subdivide and develop the area. Notable growth did not take place in San Mateo until after World War II, when housing tracts, shopping centers, and large educational plants were developed in the southern part of the city. In the 1950s, 70 percent of its working residents commuted to San Francisco, but by 1970 the majority worked in San Mateo at the electronic plants, retail stores, and business offices. With little manufacturing, San Mateo became geared toward tourism and commerce, promoting the Bay Meadows race track, parks, and retail shopping (Chapin et al. 1969:86-90; Gebhard 1985:133-134).

By 1950, the Hillsdale area of San Mateo was an evolving community and the need for new schools and college campuses to meet the demands of the burgeoning school district became apparent. The College of San Mateo, originally known as "College Heights" and completed in 1963, was designed by the internationally recognized architect John C. Warnecke. Born on February 24, 1919 in Oakland, John Carl Warnecke earned a bachelor's degree from Stanford in 1941. He enrolled in Harvard's architecture school, where he studied with Walter Gropius and completed the three-year course in one year, receiving his master's degree in 1942. A football injury made him ineligible to serve in the military (Grimes 2010). Refer to BSO, Page 3 of 6.

## BUILDING, STRUCTURE & OBJECT RECORD

Page 3 of 6

\*Resource Name or #: College of San Mateo Fine and Performing Arts Building

NRHP Status Code: 3D

### \*B10. Significance: (Continued):

After working for the housing authority in Richmond and as a draftsman in his father's firm, he set up his own architectural practice and developed a reputation for his environmentally sensitive designs for buildings at Stanford and the University of California, Berkeley. His contextual approach was applied at the Mira Vista Elementary School in El Cerrito (1951), which appeared to grow organically out of the hills behind it. His open-space design for the Mabel McDowell Elementary School in Columbus, Indiana (1960), designated a National Historic Landmark in 2001, addressed the flat landscape, with its silos, barns and Victorian houses. By 1977 Warnecke was running the largest architectural firm in the United States, with offices in San Francisco, Los Angeles, New York, Boston, Washington and Honolulu. His large-scale projects included the AT&T Long Lines Building on Thomas Street in Manhattan (1974), the Soviet Embassy (1975) and the Hart Senate Office Building (1982) in Washington, and the South Terminal at Logan Airport in Boston (1977). After 1977 he began scaling down his practice. In retirement, he grew grapes on his ranch in the Alexander Valley and worked on his memoirs, which he completed shortly before his death on April 22, 2010 (Grimes 2010; Betsky 2010).

Another important nationally recognized Modernist architect whose work was similar to Warnecke's was Edward Durell Stone. In the mid-1950s Stone moved away from strict modernist tenets and began to fuse the formalism of his early Beaux-Arts training with a romantic historicism. This historicizing aspect of Stone's work was in part influenced by his second wife, Maria Elena Torchino, and his frequent travels to Italy, which reawakened his interest in classical and Italianate precedent. A cover story on Stone in the March 31, 1958 issue of Time magazine led to a series of important national and international commissions, and Stone's firm grew in size from 20 architects to over 200. No longer an intimate design atelier, Stone's office became a stratified corporate entity and his work became uneven and formulaic. Stone continued to garner major architectural commissions into the early 1970s. The State University of New York at Albany, the John F. Kennedy Center for the Performing Arts in Washington, DC, and the Standard Oil Building in Chicago were notable examples of late phase work (Stone 1967).

The College of San Mateo Fine Arts Building and the other campus buildings from the early 1960s represents some of Warnecke's finest achievements in Modern Eclectic architectural design that blended abstract styles with Neo-Classical or formal architecture to form a cohesive campus that visually represented his values in higher education and the natural setting he was engaged in developing. Warnecke's later work, particularly during the 1980s, has been said to be sub-par with his earlier work, particularly during the 1950s and 1960s. Today, the College of San Mateo consists of approximately 17 buildings. The original 1963 Warnecke buildings are distinguishable for their Modernist design influenced by Classicism and abstraction having concrete panel walls, flat roofs, arcades, banks of arched windows, and abstract sun screens. The newer campus buildings tend to be more abstract lacking the formalism or Classicism embodied in the designs provided by Warnecke.

As a whole the campus still retains a strong sense of architectural continuity from the 1960s, despite new building additions, minor alterations to the water feature in front of the Fine and Performing Arts Building, and increased campus parking and service structures. In conclusion, the buildings designed by Architect John Carl Warnecke and constructed in 1962-1963 appear to be contributing elements to a National Register of Historic Places (NRHP) campus historic district associated with Modern Architecture (1962-1963) and an important regional example of this form of architecture designed by the renowned and Internationally recognized architect John Carl Warnecke. The contributing buildings include the Fine and Performing Arts (Building 3), Administration (Building 1), Gymnasium (Building 8), and Library (Building 9). The campus building and structures constructed post-1965 and not part of the original Warnecke plan for the campus are non-contributing elements to the district. Refer to BSO, Page 4 of 6.

## Fax Transmission

<b>Date:</b>	May 8, 2015
<b>Attention:</b>	Debbie Pilas-Treadway, Native American Heritage Commission
<b>Fax Number:</b>	916-373-5471
<b>Number of Pages:</b>	1
<b>From:</b>	Joanne Grant, Senior Archaeologist
<b>Subject:</b>	<b>Sacred Lands File Search Request</b>
<b>Client:</b>	San Mateo County Community College District (SMCCCD)
<b>Project:</b>	2015 Facilities Master Plan Amendment, Project #234.15

Dear Ms. Pilas-Treadway,

The San Mateo County Community College District (District) proposes improvements at 3 campuses in San Mateo County: Cañada College in Redwood City and the Town of Woodside, College of San Mateo (CSM) in the City of San Mateo, and Skyline College in the City of San Bruno. The planned improvements include building modernization and renovation, building demolition, new building construction, tree removal, landscaping/pedestrian improvements, changes in parking and roadways, and potential renewable energy installations.

The project locations for each of the 3 campuses are provided below.

**Cañada College:** Woodside Quad, T5S and T6S, R4W, unsectioned

**College of San Mateo:** Palo Alto Quad, T4S and T5S, R4W, unsectioned

**Skyline College:** San Francisco South and Montara Mountain Quads, T3S, R5W and 6W, unsectioned

I am requesting the following information:

- 1) Groups or individuals the NAHC believes should be notified regarding this project; and
- 2) Identification by the NAHC of any sacred lands within the subject lands that are listed within the Sacred Lands file.

Thank you for your assistance. Feel free to contact me with any questions regarding this request.

Sincerely,

Joanne S. Grant, RPA

2015 Facilities Master Plan Amendment project 234.15, San Mateo, County

Ms. Grant;

A record search of the sacred land file has failed to indicate the presence of Native American cultural resources in the immediate project area. The absence of specific site information in the sacred lands file does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Enclosed is a list of Native Americans individuals/organizations who may have knowledge of cultural resources in the project area. The Commission makes no recommendation or preference of a single individual, or group over another. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe or group. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at (916) 373-3713.

Sincerely,

*Loyta Winston, Jr.*

This list is current only as of the date of this document.

Distribution of this list does not relieve any person of statutory responsibility as defined in Section 7050.5 of the Health and Safety Code, Section 5097.94 of the Public Resource Section 5097.98 of the Public Resources Code

This list is only applicable for contacting local Native Americans with regard to cultural resources for the proposed 2015 Facilities Master Plan Amendment, project 234.15, San Mateo County.

August 6, 2015

Andrew Galvan  
PO Box 3152  
Fremont, CA 94539

**Subject: 2015 Facilities Master Plan Amendment, Project #234.15 – San Mateo County**

Dear Mr. Galvan,

The San Mateo County Community College District (District) proposes improvements at 3 campuses in San Mateo County: Cañada College in Redwood City and the Town of Woodside, College of San Mateo (CSM) in the City of San Mateo, and Skyline College in the City of San Bruno. The planned improvements include building modernization and renovation, building demolition, new building construction, tree removal, landscaping/ pedestrian improvements, changes in parking and roadways, and potential renewable energy installations.

The project locations for each of the 3 campuses are provided below.

**Cañada College:** Woodside Quad, T5S and T6S, R4W, unsectioned

**College of San Mateo:** Palo Alto Quad, T4S and T5S, R4W, unsectioned

**Skyline College:** San Francisco South and Montara Mountain Quads, T3S, R5W and 6W, unsectioned

The Native American Heritage Commission searched their sacred lands database, which failed to indicate the presence of Native American cultural resources within the immediate project area. They also provided your name as a Native American representative who may have knowledge of cultural resources within or near the project area.

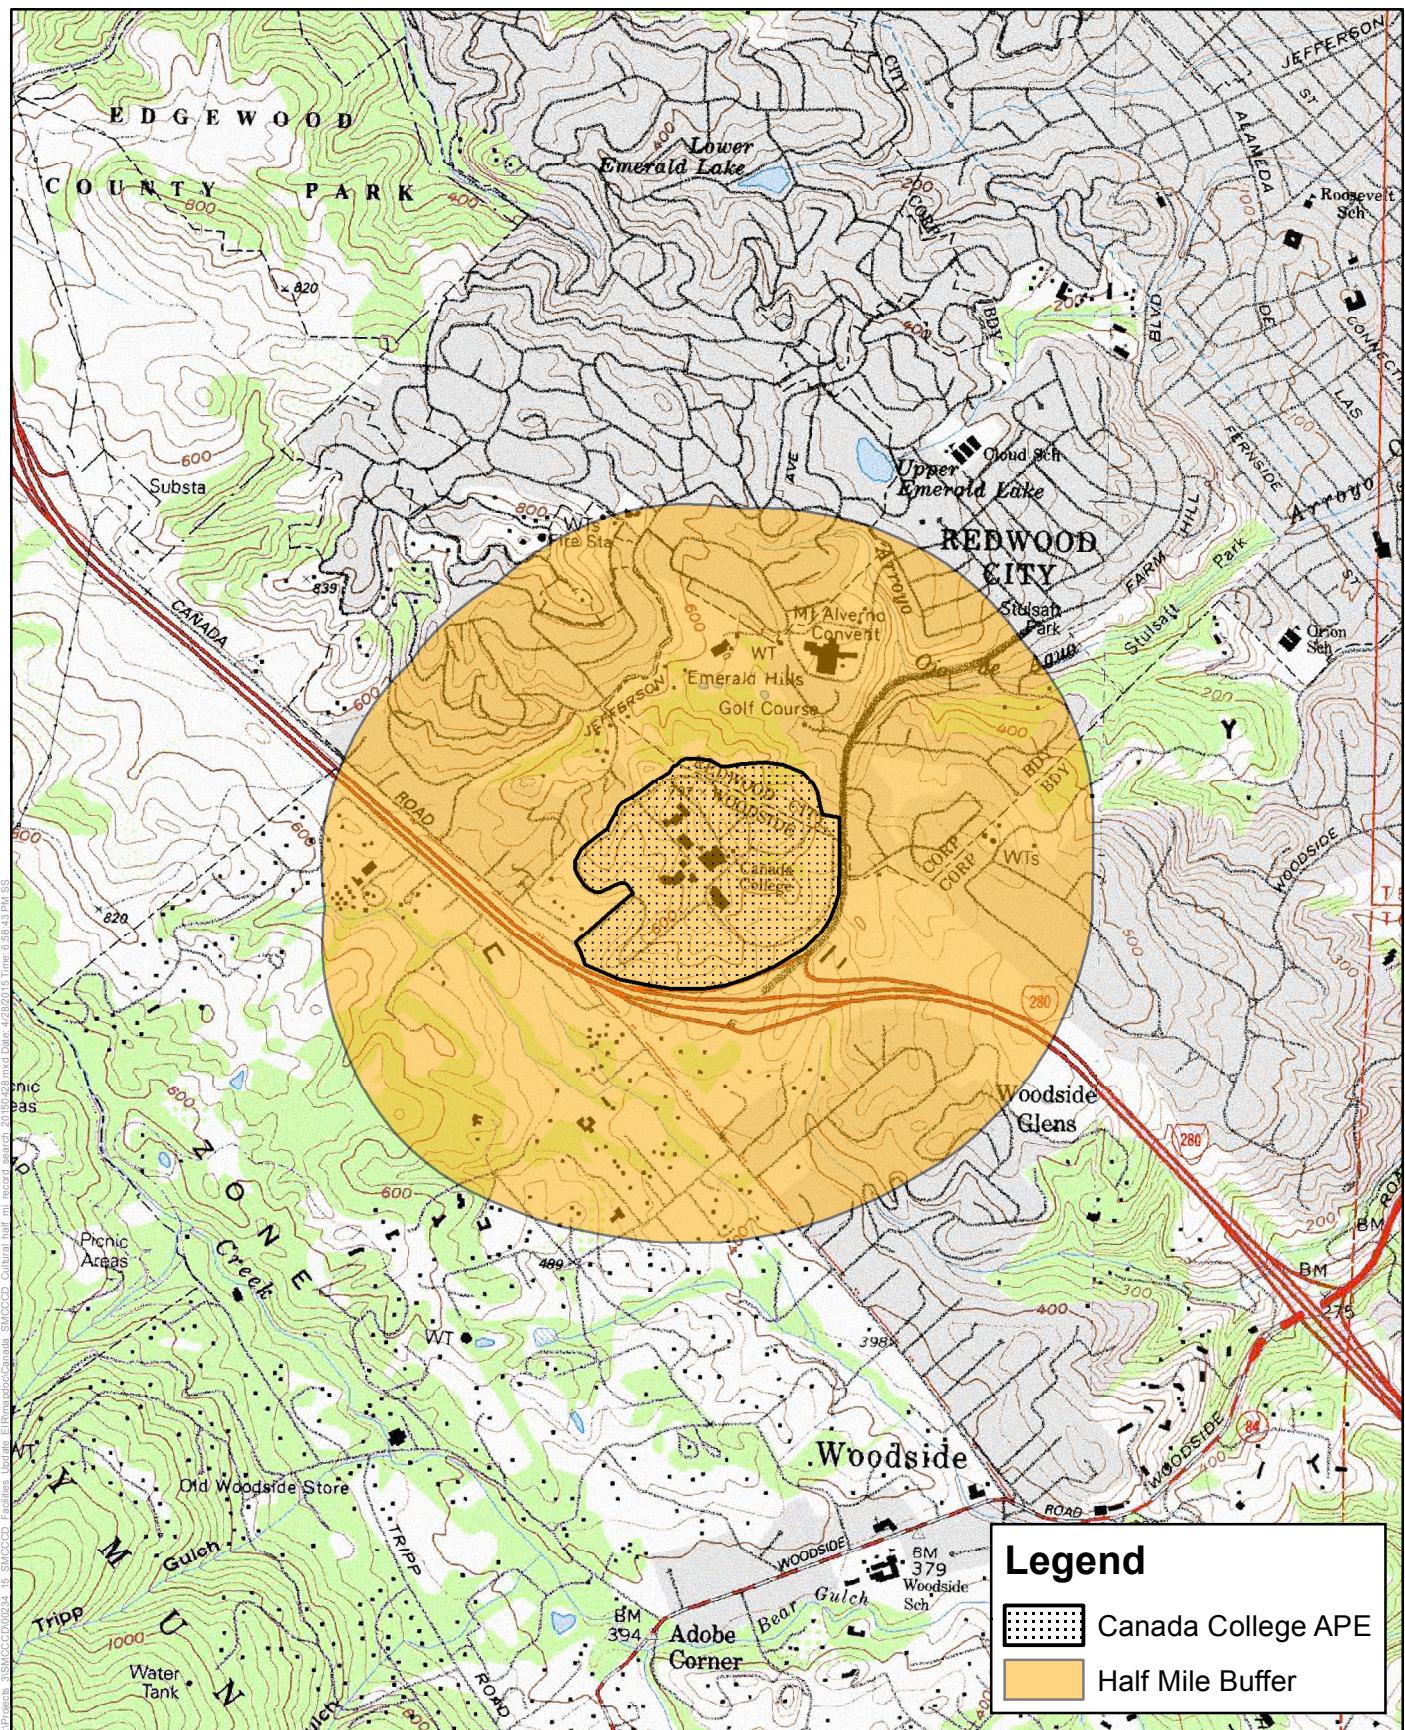

Please contact me by telephone (415) 677-7132 or by e-mail ([lily.henryroberts@icfi.com](mailto:lily.henryroberts@icfi.com)) if you have any questions, concerns, or information regarding the sensitivity of the project area.

Sincerely,

A handwritten signature in black ink, appearing to read "Lily Henry Roberts".

Lily Henry Roberts  
Archaeologist

**Table TRA-1. College of San Mateo Health Club Usage and Vehicle Trip Rate Estimates**

	Daily Vehicle Trip Rates	Weekday Check- ins <sup>1</sup>	AM Peak Hour (weekday)						PM Peak Hour (weekday)						
			Pk-Hr Trip Rate	Split		In <sup>1</sup>	Out <sup>1</sup>	Check-Ins & -Outs <sup>2</sup>	Pk-Hr Trip Rate	Split		In <sup>1</sup>	Out <sup>1</sup>	Check-Ins & -Outs <sup>3</sup>	
<b>Member Check-Ins</b>															
All Members	5,014	866				76	45	121				80	59	139	
General Public Members <sup>4</sup>	3,943	681				60	35	95				63	46	109	
<b>Vehicle Trip and Trip Rate Estimates</b>															
All Members <sup>5</sup>	5,014	0.14	681	0.02	63%	37%	60	35	95	0.02	58%	42%	63	46	109
<b>Notes:</b>															
Table developed by Hexagon Transportation Consultants.															
1. Based on 2014 September Check-Ins Data collected by SMCCCD. There were 5,014 members as of September 2014.															
2. AM peak hour check-ins & -outs include 84 check-ins in 8-9 am and 52 check-ins in 7-8 am which was assumed to exit in 8-9 am.															
3. PM peak hour check-ins & -outs include 94 check-ins in 5-6 pm and 65 check-ins in 4-5 pm which was assumed to exit in 5-6 pm.															
4. It was assumed that faculty, staff, and student members go to the club before and after work or school, so they don't generate additional vehicle trips.															
Therefore, check-ins were calculated for the general public (GP) members, using the ratio of GP members to all members.															
It was assumed that the membership breakdown in September 2014 would be similar to the breakdown in January 2015.															
5. Daily and peak-hour trip rates were calculated using check-ins from GP members. It is assumed one vehicle trip per check-in.															

## MEMBERS Through January 2015

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=553]

FAIL - Total volume less than 650 for intersection  
with less than four approaches.

#### SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.1]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=36]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=604]

FAIL - Total volume less than 650 for intersection  
with less than four approaches.

#### SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Major Street Volume: 811  
Minor Approach Volume: 106  
Minor Approach Volume Threshold: 357

---

**SIGNAL WARRANT DISCLAIMER**

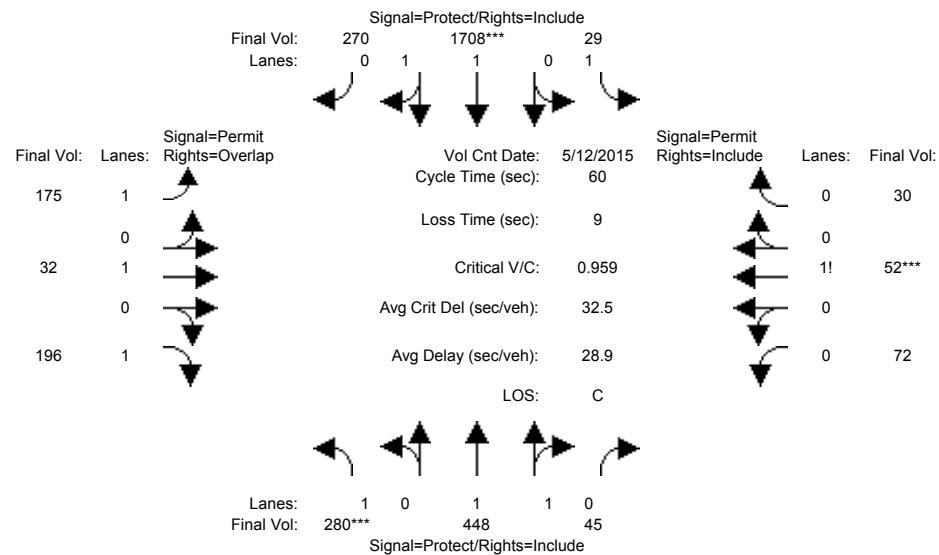

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Delay Signal Warrant Report

\*\*\*\*\*

Intersection #2 Canada Road & West Entry Drive

\*\*\*\*\*

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound	South Bound	East Bound	West Bound
Movement:	L - T - R	L - T - R	L - T - R	L - T - R
Control:	Uncontrolled	Uncontrolled	Stop Sign	Stop Sign
Lanes:	0 0 0 1 0	0 1 0 0 0	0 0 0 0 0	0 0 1! 0 0
Initial Vol:	0 354 21	32 129 0	0 0 0	0 10 0 44
ApproachDel:	xxxxxx	xxxxxx	xxxxxx	11.2

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=54]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=590]

FAIL - Total volume less than 650 for intersection  
with less than four approaches.

#### SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Signal Warrant Rule #1: [vehicle-hours=0.2]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=68]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=623]

FAIL - Total volume less than 650 for intersection  
with less than four approaches.

#### SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Major Street Volume:	720			
Minor Approach Volume:	47			
Minor Approach Volume Threshold:	398			

#### SIGNAL WARRANT DISCLAIMER

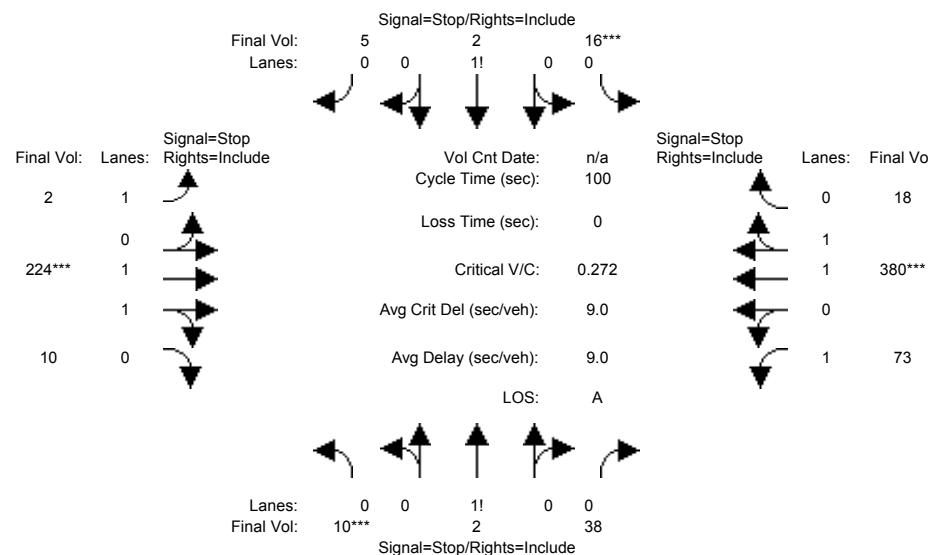

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.
